

Environmental Policy

WALLENIUS WATER shall be perceived as a world leader in sustainable water treatment. With our offerings we will contribute actively to a sustainable development of society by presenting the possibility to treat and recycle water without creating negative environmental impact. Our technology is based on upstream solutions and designed as an integral part of our business plan, including both short and long term goals. Our products will be developed and designed with a life-cycle perspective to ensure manufacturing and use with highest possible resource efficiency.

We focus on the following activities:

- continuous improvement of our environmental performance and assessment
- environmental criteria when selecting new partners and suppliers
- review of our suppliers and dialogue with other stakeholders
- ensure compliance with legal requirements
- education of our employees to take individual responsibility for our environmental work

A handwritten signature in gold ink, appearing to read 'T. Elgh'.
