

18 November 2016

Our Azure Managed Services practice is experiencing significant growth, and as such we are recruiting for an experienced Azure Ops Engineer to join our team.

You will have many years' experience using IaaS and PaaS features of Azure, including:

- Cloud service management
- Migrating from Cloud Services to ARM
- ARM template design and execution
- Exceptional Powershell capability
- Automation and configuration management tooling such as Ansible, Chef, Salt or

Puppet

- APM tooling such as New Relic, AppD or Stackify
- Tools such as ELK, Splunk or App Insights for correlated log analysis
- Comprehension of typical Azure limitations, and workarounds
- Geo-rep Azure SQL DB's
- A natural inclination to automate
- Solid IaaS experience
- Azure AD
- Express Route

You'll be managing diverse use of Azure across many customers, utilising Azure regions around the world, so there is never a dull moment.

Comprehensive on-going training is included in the package.

If this sounds like you, or you think you have the interest and inclination to spin up quickly, then please apply.

Regards

Symon Thurlow
