

TSM Services:

*Keep Your Backup Environment Healthy
and Up to Date*

The explosive growth of data continues to test even the most robust backup and recovery environments. Lighthouse offers services specifically tailored to Tivoli Storage Manager (TSM) to help ensure that your backup & recovery efforts are streamlined, efficient and cost-effective.

Highlights

TSM HealthCheck

Backup/Storage Assessment

Implementation, Remediation
and Optimization

TSM Healthcheck is a tools-assisted service designed to help your team diagnose, repair and optimize your TSM environment quickly and cost-effectively.

TSM Assessment is an in-depth analysis of your backup/storage infrastructure associated with TSM. Lighthouse TSM experts will review and assess your current and projected backup/storage needs, as well as best practices for implementing such an infrastructure. They will develop recommendations for redesign, remediation or enhancements to your backup/storage architecture, policies, and procedures.

TSM Implementation, Remediation and Optimization Services

include installation of TSM, including integration with your existing hardware. We can migrate TSM to new hardware. Our implementation services also cover TSM version release or maintenance upgrades. And, we can optimize the performance or configuration of TSM to support recovery expectations or remediation activities.

TSM Cloud Ready – We can show you how to extend your TSM investment to take advantage of inexpensive public cloud storage over a WAN link, and eliminate the need to maintain backup media, servers, and additional backup infrastructure in a distributed environment.
