

**Generate and maintain dynamic QR Codes linked to any record in ServiceNow®**

## Overview

Stave QR Code Generator allows the creation of single or batch QR codes. The QR codes generated dynamically point any mobile device to ServiceNow records.

The QR codes can link to portal pages, Catalog Items, Knowledge Base Articles, or even external URLs. QR codes links are dynamic and can be updated at any time, meaning you don't need to print and re-print your media.

Track your physical assets to expedite inventory and auditing tasks. Issue secure employee badges that make the sharing of contact information a snap. Display signage informing or educating employees with a link that ties directly to the digital word. All of this and more can be accomplished with QR codes.

### Track Assets from Any Mobile Device

QR Codes are designed to be readable from cameras, like the cameras on any mobile device. Gone are the days of requiring special laser scanners to query information. Point at any asset and immediately see everything about it, from details to maintenance history.

### Disseminate Information with Dynamic Signage

Incorporate your online Knowledge Base into the real world by placing linked QR Codes on the posters, signage, and bulletins that you publish and place around your location. Users can scan and immediately be tied into the most up-to-date electronic record.

### Interactive Knowledge

Provide help, assistance, or general information to your employees with dynamic and interactive signage. With any mobile device, employees, visitors, and guests can scan the QR code and be linked to the information they need, or start an automated process with full integration to ServiceNow's Runbook Orchestration and IT Automation suite.

### Powerful Badging

Know who's who walking your corporate campus has never been easier. With complete integration into ServiceNow's personnel data, you can integrate QR codes on employee badges to increase security and allow employees to use the code for physical access to your 3rd-party security access solutions.

### Lightning Fast Inventory

Imagine the ability to conduct inventory scans of dozens of critical assets in seconds. With complete integration in the ServiceNow CMDB and Asset Management applications, you can generate and tag your managed equipment and simply scan every time you need to validate inventory.
