BOLT ON NEW FEATURES TO SERVICENOW

You're a ServiceNow superstar. Nobody can migrate enterprise business processes from their legacy, paper-based formats into automated digital workflows better than you. You spend your days working 9 to 5 developing new capabilities in the platform to make your enterprise run more efficiently.

But migrating services from around your business into ServiceNow is starting to get complicated. While everyone else in the organization is benefiting from the Straight Talk of increased efficiency, simplicity in maintaining a single source of truth, and enhanced process design, you're the one who has to manage this new digital platform. When you're juggling Update Sets, building custom applications, and testing integrations, you could really use some extra tools that make working in the platform easier. With how you've configured your instance, It's All Wrong, But It's All Right.

Now you've got a new move; purchasing Stave utility applications from the ServiceNow Store. We provide apps to sync with your enterprise calendar, integrate with best-of-breed maps, keep sensitive data out of the cloud or scramble the data that's already in, build portals faster and cheaper, and much, much, more. You'll learn the thing with apps from the Store is that it's usually easier to buy enhanced capabilities, and often better when you do, than if you stuck with the originals. And the best part is anyone can Try before you Buy.

Buying utility apps gives you the augmented capabilities in your instance that you need, and it's as simple as an Early Morning Breeze to download them free for the first 30-days. Plus, all Stave apps are fully-supported and you'll have a professional software team on-hand to help every step of the way.

Make sure your Rockin' Years using ServiceNow last decades. Expand your deployment with new capabilities gained by using Stave applications from the ServiceNow Store and you'll be hearing, "I Will Always Love You", from all over your business.
