

# WHAT'S HIDING IN YOUR SERVICE NOW INSTANCE?

You're a ServiceNow expert. You have black-belt ninja skills when it comes to administration, training, workflows, and upgrades.

And, boy, those upgrades. You've been tracking Update Sets and migrating across sub-prod environments since ServiceNow's releases were named after seasons. You've got XML files in folders and a spreadsheet that lists all the tables you've customized over the years and have to manually update. And don't forget those apps you found on Share that you need to fix...and re-fix every..single...time.

With having to manage all that, it's a wonder you ever get to see daylight. You're no quitter, but a zBoot is looking better and better every day.

But everyone in the business is relying on ServiceNow to manage their line-of-business processes and there's years of value in your instance. What can you do?

Now there's a cure; purchasing apps from the ServiceNow Store. Instead of managing random

code, deploying new capabilities into ServiceNow is as simple as clicking "Try". Buying these apps gives your business new features and capabilities in ServiceNow, plus the benefits are immediate and the costs are significantly lower than if you had to build it and support it yourself. That makes it easier for you.

Plus, every Store app is Certified to be Scoped, meaning you can remove it at any time without leaving bits behind in your instance, or breaking any another application.

By deploying apps available from the Store, you are now able to provide value to the business faster and with less effort, and you'll be home in time to eat well before midnight.
