

DO YOU WRESTLE WITH MANAGING SERVICE NOW CONFIGURATIONS?

You're a ServiceNow expert. You can update UI Policies and debug a Script Include faster than a 3-count. You've faced off against the toughest, meanest instances and still walked away a winner.

But keeping track of all the customizations in your customer's instances is tough work. Managing Update Sets, writing governance policies, and going to HI for service requests can make you want to bang your head off the wall. And as ServiceNow expands into more and more areas of the business, these challenges are only going to get harder. You probably feel that you've met your match, but don't throw in the towel just yet.

Now you've got a new move; purchasing apps from the ServiceNow Store. Instead of managing random code, deploying new capabilities into ServiceNow is as simple as clicking "Try". Buying these apps gives your clients new features and capabilities in ServiceNow, plus the benefits are immediate and the costs are significantly lower than if you had to build it and

support it yourself. That makes it easier for you.

Now everyone you support can experience the benefits of the platform and you look like a champion. Scratch that; an Intercontinental Champion. By deploying apps available on the Store, you are now able to provide value to the teams you support faster and with less effort, and each app is certified and supported by independent software professionals.

Implement ServiceNow Store applications today for your customers to provide them capabilities to go further, faster and become the ultimate warrior against inefficiency.
