# Actifio Global Manager v6.2

Enterprise Hybrid Cloud Challenge

Virtualization has made it very easy to deploy enterprise applications everywhere, in multiple data centers, or in cloud models from private to public to hybrid. With the sprawl of data has also come the sprawl of backup appliances. Enterprise data management with consistent security policies, SLA based data protection policies, and data retention policies have become an enormous challenge, especially in hybrid cloud environments.

Actifio Global Manager at a Glance

Actifio Global Manager (AGM) now enables web scale management of Actifio software and physical appliances in large hybrid cloud environments. Enterprises can design, configure, and schedule backup, replication, and retention SLAs from a central location. Consistent security policies can be pushed across the organization for all Actifio physical (CDS) & virtual (Sky) appliances. AGM makes it easy for daily backup job monitoring, troubleshooting, and capacity monitoring. New workloads can be distributed across all Actifio appliances in multiple data centers, as well as private, and even public clouds like AWS. .

Key Features & Capabilities

Actifio Global Manager (AGM) key capabilities include:

- **Scale up from one to multiple instances of Actifio,** quickly and easily managing thousands of applications.

- **Deliver standardized Service Level Agreements (SLAs) and security models** across the enterprise. Ensure that application data is consistently managed by the same SLAs and users have consistent rights to access only the relevant data, independent of location or organization.

- **Globally filter and sort** applications, jobs, and events.

- **Automatic load distribution** distributes new VMs among a pool of Actifio appliances for data protection.

- **Simplified capacity management** enables 'one click' migration of application protection policies between Actifio appliances.

- **Next generation visualization** displays timeline-based views of backup images, SLAs, backup, replication events, and alerts from across an enterprise. It also enables all restores to be performed from a single pane of glass.

- **Easy integration by users and MSPs into portals** and other custom software via a central entry-point and RESTful API.

Key Benefits

AGM delivers substantial operational benefits, including:

- **Eliminating significant operational complexities** by enabling scale out management of all Actifio appliances in remote sites, even those in public cloud such as AWS.

- **Enabling better IT governance** by pushing centralized role-based access control (RBAC) policies from AGM to all Actifio CDS \ Sky appliances.

- **Reducing operational burden** by automating new VM workload distribution across multiple Actifio CDS \ Sky appliances.

- **Saving significant time** with one click migration of application protection policies to a different Actifio CDS \ Sky appliance.

- **Reducing capital and operational expenses for Managed Service Providers** (MSPs) with a secure multi-tenant, scale-out architecture. Operations can centrally administer, manage, and monitor multiple tenants. Coverage extends anywhere from customer data centers, to MSP's data centers, to the Amazon AWS public cloud.

System Requirements

Actifio Global Manager (AGM) is delivered as OVA. It can be deployed using a VMware vSphere Client.

AGM Virtual Appliance needs:

- 2 virtual CPUs
- 4 GB of virtual RAM
- 50 GB free disk space
- 1 virtual network interface card (vNIC)
- A static IPv4 address

AGM is qualified for use with the following web browsers:

- Google Chrome version 30.0 and higher
- Microsoft Internet Explorer version 11.0 and higher
- Mozilla Firefox version 35 and higher
- Apple Safari version 7 and higher

AGM v6.2 can manage Actifio CDS/Sky appliances with v6.2 software.

Pricing

The pricing model for Actifio Global Manager (AGM) is based on the total amount of Actifio Managed Data License (MDL) managed by all Actifio CDS and Actifio Sky appliances under the management of AGM.

AGM manages up to 20 TB of MDL for free.

About Actifio

Actifio virtualizes the data that's the lifeblood of businesses in more than 30 countries around the world. Its Virtual Data Pipeline™ technology enables businesses to manage, access, and protect their data faster, more efficiently, and more simply by decoupling data from physical storage, much the same way a hypervisor decouples compute from physical servers. For enterprise-class backup modernization, self-serve instant data access, or service provider business transformation, Actifio is the first and only enterprise class copy data virtualization platform.
