

The Best in Concrete Technology!

CANCRETE® waterers are engineered to withstand harsh winters, hot summers and heavy use in all feedlot operations.

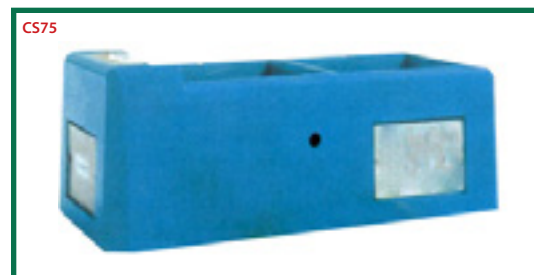

Air entrained concrete and superior attention to quality control throughout the entire precast process is the key to Concrete durability. Air entraining produces microscopic air pockets that allow any moisture in the concrete to expand and contract in these pockets, not in the concrete itself. The result is a super strong hull that can weather the freeze / thaw cycle without deterioration. It's no big secret, just a lot of hard work and attention to the details.

Special Features:

- Deep trough bowls are easy to clean
- Models C250 & larger feature two funnel drains
- Precast hulls are steel reinforced
- Available in Electric, Continuous Flow & Auto Continuous Flow
- 6000 PSI air entrained sulphate resistant concrete
- No sharp corners
- All stainless hardware components even the float ball
- Models available for any size pen

Get the right waterer in the right location! Waterer specifications and location in your beef barn is critical to optimizing feed efficiency and cattle performance.
