

Increase your profits with better fuel management.

5% of fuel loads delivered to retail sites happen during run-outs

Each run-out event lasts an average **6** hours

3% of fuel deliveries result in haul-backs

Each haul-back event cost an average of **\$125**

Tightly managing fuel inventories reduces the amount of working capital in the ground

Reducing inventory in slow moving products by **500** gals. increases the flexibility for load shifting

During a run-out **2/3** of the lost margin is on in store sales, and, many customers who drive off won't return

Run-outs and retains cost an average C-store over **\$3000** per a year
