Working together

How does OneFile integrate with other learning systems?

What is software integration?

'The process of linking different computing systems and software applications so they can work together as one.'

At OneFile we use an API tool to integrate with other software applications. It's a clever development that builds a bridge between two programmes so users can transfer data seamlessly, meaning you only have to input data once.

How can I integrate two learning systems?

Integrating two learning systems is simple.

Just fill in this **integration form** and we'll create a support ticket for approval. When we have approved the integration, our developers will allow access to our API.

The other software provider will then be able to develop a link through the API.

What happens to my data?

By integrating OneFile with external software software, you can share data between the two platforms easily. You only have to enter data once, and all learner information will be available on both systems automatically.

When the integration is complete, all learner information from the other system will be available within OneFile. Then you can add tasks, plan assessments, record feedback and schedule reviews at the touch of a button. This means you'll always have the information you need, helping you make informed decisions more quickly.

It's a two-way street

Integrations are great news for managers.

OneFile can be integrated with any external software – including MIS systems. This connection will allow managers to easily export data and reports from OneFile into their own internal software.

Users can sync data overnight or choose to sync certain information at any time – ensuring live records in both systems are always up to date.

Who does OneFile integrate with?

We already integrate with a range of software systems:

Click on a logo to see how OneFile integrates with each system

But this list is far from exhaustive – OneFile can integrate with any external system. Our in-house experts will help your developers or data administrators and show them how to access our API, so another software provider can simply build a bridge to connect with OneFile.
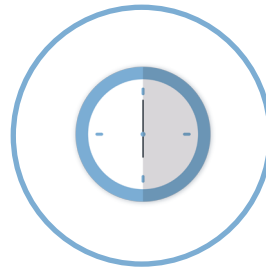

As a data processor, we make your data work for you, and are happy to develop any integration that will help make your life easier.
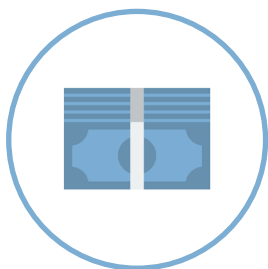

What are the other benefits?

Easy to use

Users can make changes to data in both systems in just a few clicks.

Saves time

You only have to enter data once - it's all transferred automatically.

Lower costs

Save money on admin time, printing and more.

Increased performance

As everything is in one place you can work more efficiently.
