

World-Class Veneer Doors

by Dedicated American Craftsmen

**ARCHITECTURAL
FOREST PRODUCTS**

Enhance your interior design with AFP veneer doors. AFP manufactures a wide range of quality wood-veneered doors for interiors that bring your design visions to life. Our custom manufacturing capabilities offer architects, designers, contractors and millworkers the extraordinary flexibility to suit their specifications and aesthetic criteria. Available in slab condition or beveled, AFP veneer doors are machined and factory finished to your specifications.

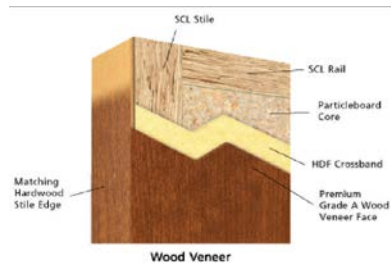

For more than 25 years, AFP has manufactured fine architectural wood doors and provided exceptional service to commercial office and residential markets. We understand the contract business and its demanding quality standards and schedule requirements. And that means our consistent high quality and lead-time reliability are second to none, from paneling and other millwork items to custom furniture, including veneered and laminated tabletops.

Materials
to fit your design.

Craftsmanship
to fit your standards.

Materials

AFP uses only the finest materials to manufacture quality wood-veneered doors. Its stringent quality control ensures the selection of properly kiln-dried and balanced solid woods to prevent warpage. Whether you're looking for commercially available domestic or imported veneers, including reconstituted veneers, AFP provides any veneer cut and match available. In fact, all veneered doors are matched and spliced by hand.

Size/Construction Options

Designed to your exact specification, AFP standard doors are available in 1-3/4" standard thickness or custom thicknesses by request. Our unitized core system bonds the stiles, rails and particle board into a stabilized, stress-free assembly which is sanded to tight tolerances. This ensures a flat, smooth surface of uniform thickness, eliminating telegraphing regardless of facing material used. The 5-plywood or painted construction method for veneered doors further results in a clean, attractive edge detail.

Factory Finish Options

Few things match the beauty and elegance of a well-finished door. To achieve the level of quality unattainable with field-finishing techniques and reduce installation costs, factory-finished doors are recommended. All surfaces are first prepared with abrasive planing and careful hand sanding. What's more, AFP can match virtually any tint or color and submit samples for approval, even on special finishes. AFP also offers a superior quality paint finish on hardboard-faced doors, with primer, paint and varnish coats. The result? An even, solid appearance, matched to any color specification.

Glazed Doors

Beauty and quality are clear in AFP glazed doors. Openings for glass inserts are made to specifications, meeting any sizes within the limits of industry standards for glass surfaces and WHI requirements. AFP provides integrated hardwood framing, bonded to the core, for added stability and to prevent face materials from splitting in corners. Several shapes and sizes of flush wood moldings are available to match door faces. Glass is optional and can be factory installed on request.
