## **LOCAL CHEMICAL SUPPLIERS**

Do NOT fill any chemicals until after start-up!

There must be ventilation in these chemical storage & treatment areas. (We offer chemical resistant exhaust fans & ducting, at additional cost.) A concrete dam should be installed for containment in the area of these tanks and we offer a leak detection float sensor (Model #PP-44T) is available, at extra cost. This area should be epoxy coated (floors, dam, & walls).

We recommend 5% solution of hydrochloric acid (HCl) and 5% solution of sodium hydroxide (NaOH). You should get enough chemicals to fill the existing permanent drums or tanks. ----- Gallons of each of the two chemicals is needed!

In addition, the owner should keep at least two (2) additional fills of each chemical on hand, for quick replenishment of the existing drums or tanks when they become empty. Owner can purchase this later.

Buy these from whoever gives you the best price and delivery (they may offer system filling for you, to be done after start-up by T&C):

1. Frank or Carlos  
Acid Waste Mgt.  
(914) 423-1506
2. Bill Spielman  
Independent Chemical Company
