

Automic™ WORKLOAD AUTOMATION

Continuous Operations from Automic

Key Benefits

- **100%** visibility over end-to-end processes
- Processes run up to **70%** faster
- **90%** of data transfer errors eliminated
- SLAs approach **100%** completion level
- Manual effort reduced by **90%**

Deliver Continuous Operations with your business application processing.

Business Challenge

Workload Automation is more complex than ever. You need to orchestrate a complex, diverse landscape of applications, platforms and technologies. Islands of automation are a barrier to scaling and standardizing your workload activities. Processing errors are common because of manual handoffs. And the lack of an end-to-end view of the business process makes inefficiencies and problems difficult to resolve. In addition to this you are operating 24x7 and cannot find maintenance windows to upgrade your infrastructure in order to innovate, agility simply isn't possible.

The Automic Solution

It is possible with Continuous Operations. Automic Workload Automation gives you the agility, visibility and scalability needed to respond to the constantly changing technology landscape. This next-generation enterprise automation platform centrally manages the execution of all your business processes across mainframe, cloud or hybrid environments, and never stops – even when doing an upgrade to the next version.

Combining robust automation technology with real-time intelligence, Automic Workload Automation forecasts, visualizes, and automates complex IT and business processes across the enterprise. Through real-time monitoring of processes, data flows and applications, Automic Workload Automation matches your projected execution plan against available resources, allocates resources on demand, and makes real-time decisions on job

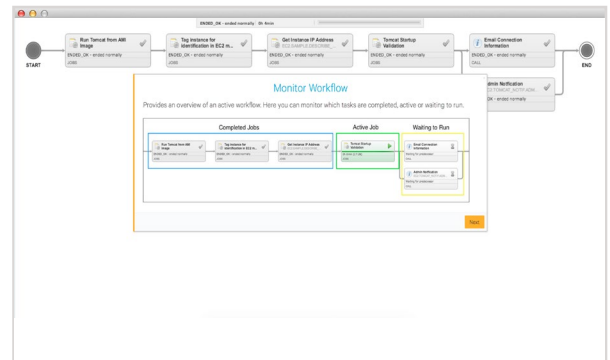

routing. By eliminating the need for manual intervention, Automic not only saves your staff time, freeing them up for more strategic tasks, but it also reduces the errors that often accompany manual steps.

How it works

Automic Workload Automation supports the most operating systems, databases, applications and platforms in the industry. Proven agents and adapters provide prebuilt interfaces to applications ranging from ERP systems such as SAP and Oracle, to business intelligence and data warehousing solutions, to financial solutions and Big Data. With this extensive agent and adapter support, you can rapidly integrate all your applications and tools across the enterprise into a single comprehensive automation strategy, run them all as one coherent process flow, and monitor and manage them through a single pane of glass. Several key capabilities make Automic Workload Automation the most advanced and complete solution on the market.

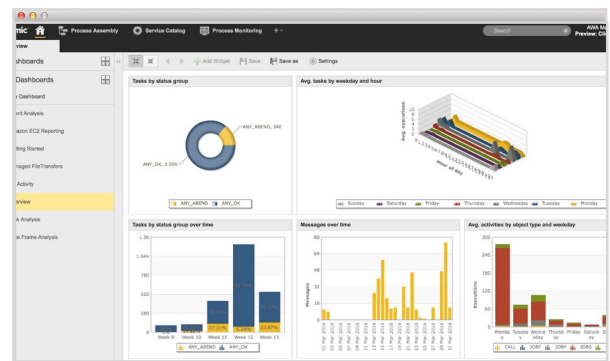

- Scalable, software cluster architecture ensures reliability and unlimited capacity without the need of specialized fault tolerant hardware
- Zero downtime upgrades and software updates so that there is no need for a maintenance window and no downtime for the service
- Multi-tenancy enables users to easily expand a system with an additional dev/test system or create a new instance without installing a new system

- Support for mainframe, distributed, virtual, cloud and the broadest suite of certified application integrations and workflow templates
- Intuitive web interface that can be customized for monitoring, administration, development and self-service
- Dashboarding and reporting of all workflow activities for highly granular monitoring, and forecasting based on historical data or hypothetical scenarios
- Integrated file transfer ensuring timely, accurate and secure information transfer and eliminating the need for any extra tool
- Comprehensive auditing of all automated processing and user activity, keeping processes in conformance with company regulations

Why choose Automic?

- A wealth of experience at your fingertips with specialists in Europe, the U.S. and Asia as well as Automic partners all over the world.
- The only vendor on the automation market offering 24x7 global support, a dedicated technical account manager and committed SLAs on incident resolution time
- Automic University offers you unrivalled depth of training expertise, skills and insight— on-site or e-learning all tailored to your unique needs
- Pre-configured migration packages used by our specialists with hundreds migration projects already completed, comprising more than two million jobs
- Automic PlugIn Marketplace featuring hundreds of Business Automation templates and solutions for any enterprise automation need
- Automic Community for you to engage with other users and people interested in how to deploy and use Automic for different automation requirements
