

Trying to sell more online? Stop wasting time searching for your own inventory!

According to the [SBA](#), one of the main reasons for small business failure is poor inventory management. This becomes amplified in eCommerce. An oversell hurts your search results on marketplaces, thus reducing visibility and therefore reducing sales; not to mention sales lost from failure to re-stock at the appropriate time. In house costs due to oversells as well as hidden costs can sink a company. A good warehouse management system can allow you to make informed decisions and spend time doing what you do best: growing your business.

- Get it right the first time
- Speed up order to ship times
- Access accurate data anywhere

Do you have negative marketplace feedback, increased customer service and labor hours, lower traffic and search result visibility, unhappy customers, or lost sales?

SkuVault can fix that.

SkuVault Warehouse Management System

[SkuVault](#) is a web-based warehouse management system that specializes in preventing out of stocks, improving warehouse efficiency, and reducing human error. SkuVault plays nice with and is a certified partner of popular eCommerce applications such as ChannelAdvisor, ShipWorks, Shopify, and more, although it can of course be used as a standalone solution. One of the main goals of the system is EASE OF USE.

With its universal barcoding, real-time quantity pushes, efficient pick lists, expedient quality control, advanced reporting, and simple-to-learn user interface, SkuVault has many tools to keep your inventory in check.

- In the cloud safe and secure
- Responsive for mobile devices
- Plans from startup to enterprise

A SkuVault Client Story

Tommy Millett is the owner of [SlimShades](#), a small but growing eBay business, who chose SkuVault to keep track of his inventory. As SlimShades began to grow, Tommy noticed that it was becoming harder to manage his inventory levels. Too many bad buys and too much overstocking on inventory were eating away at his profit margins - it was time for an inventory management solution able to accommodate his needs as an eCommerce merchant.

When asked which features of SkuVault he believed most contributed to the smoother operation of his warehouse and to the increased accuracy of his inventory, Tommy said:

"Some of my favorite features of SkuVault include built in quality controls (which help prevent errors), user-based logs to track the actions of every person, and direct integration with my shipping software... The system is very nearly dummy proof. SkuVault allows me to tag products into specific locations, and in multiple locations when necessary. This means there's no looking for products; I know where everything is via a pick list or simple scan or search in SkuVault. SkuVault also provides me with sales data and current inventory levels which allows me to make educated purchasing decisions. This is absolutely critical for successful operations."

What's Tommy's final say on SkuVault? **"I believe SkuVault is *the* inventory management solution for ecommerce based businesses of any size."** See his full story [here](#).
