

## KEEPING PACE WITH TECHNOLOGY JUST GOT EASIER

Machining technology is progressing quickly, with advances in hard milling, high speed machining, chip thinning, live tooling on lathes, and more. CAD/CAM software is also changing faster than ever before. High quality training is a must to remain current and competitive — whether as a shop needing to grow your business, or as an individual looking for professional advancement.

Mastercam University® (Mastercam U) is designed to **ensure that Mastercam® users and students are ready to meet today's challenges** by delivering solid, easy-to-use, online training that covers everything from the basics to the latest advancements.

Mastercam U helps build and maintain a sharp skill set, on a schedule that fits every shop's needs — and gives students practical training in real world applications.

### Premier Mastercam Training – Online

Mastercam U delivers training on the latest advancements in Mastercam, the world's most widely used CAM software.\* Designed by CNC Software, Inc., with guidance from the Mastercam National Certification Committee, it features learn-as-you-go classes presented by experienced machinists and professional instructors.

Students receive feedback on their progress through a series of multiple-choice tests, and they receive a printable PDF Certificate of Completion when they finish. This is the gateway to Mastercam Certification.

### The Power to Go Further – Faster

Mastercam U delivers the same in-depth training used for Mastercam Resellers, business partners, and internal staff. With online video training, everyone can learn at their own pace, on their own schedule, and review any portion of content at any time. Each Mastercam U subscription includes a copy of Mastercam Demo/Home Learning Edition, providing hands-on experience with a training version of the software. Mastercam U also provides the preparatory course necessary to achieve Mastercam Certification.

"I logged in for about six hours straight — it was fantastic. It was great learning — I am going back for more tonight!"

- William Black, Aphelion Technologies

# AVAILABLE COURSES

## Mastercam Mill

This introductory mill course covers wireframe and solids construction, plus 2D and 3D toolpaths. A preparatory class for Mastercam Certification.

## Mastercam Mill 3D

Covers surface and solid modeling, 3D machining, and 4-axis programming.

## Mastercam Lathe

Complete turning course presents design and toolpaths, including C- and Y-axis machining.

## Mastercam® for SOLIDWORKS®

Learn how to use the world's leading modeling software integrated with the world's most widely used CAM.

## Mastercam Multiaxis

Learn how to create Multiaxis toolpaths plus setup considerations, part verification, machine simulation, and more.

## Principles for Machining

This course integrates and documents national STEM standards to present the basics of cutters, feeds and speeds, materials, and much more.

**Check back often for updates to existing classes and the addition of new courses currently being developed.**

## Content Included with Mastercam Maintenance

Maintenance customers have access to our ever-expanding library of technical sessions, including topics such as:

- Exploring the benefits of stock models
- 3D Tooling
- PrimeTurning™
- Model-Based Definition
- And many more...
