Business Solutions with SharePoint

This edition of "Buchanan's Buzz" is around new technologies and how Buchanan is using these technologies to solve business needs. In the past few months our SharePoint and Office 365 work has been on the rise. With all the modern technologies moving to cloud based solutions, and content remaining king, we are seeing SharePoint's ability to store, organize and distribute mass amounts of information being the key to solving many business problems.

The flexibility and comprehensiveness of our SharePoint solutions are broad. Most organizations are moving from a SharePoint 2013 on premise environment to a SharePoint Online environment, but new build outs are popular as well. CIOs and other technology leaders are becoming versed on the flexibility and wide array of SharePoint offerings. Most recently, Buchanan

has used SharePoint for the new build of a customer facing Internet site that lives in Azure, another customers' Internet site that included mobility features, another that involved building an Extranet site that allows user access to solve the need of vendor and supplier sharing of information, and building an Intranet site that allows internal teams to see department specific information, yet provide immediate retrieval and archive access to many forms and documents needed for the business. We've moved network shares to SharePoint Online that have provided accessibility to document libraries and document repositories, and in one unique case, even moving a SharePoint online application back to an on premise environment for a unique need that company was facing.

SharePoint's ability to house large quantities of information

makes it an excellent portal for news feed websites, whether they be internal or external. It offers the ability to provide timely information that is critical to departments like human resources, marketing and executive groups, through "need to know" categories, timely announcements, and can even set expiry dates so outdated information is automatically hidden. The wide array of information storage offered by SharePoint is difficult to compete with, it is the best solution in many cases, but many business leaders are unclear of where to start, or do not have the internal manpower to take on the project. For this reason, we as a company offer a Discover and Design approach that will provide the education, scope, budget, resources and timelines you need to tackle solutions for your organization.

ANNOUNCEMENTS

Vendor of Record

Announcing our Vendor of Record status with Halton Regional Police in our Ontario market. The VOR status provides set and specialized pricing for other government agencies.

Preferred Supplier Partner

Buchanan is now a Preferred Supplier Partner for the Ontario Educational Collaborative Marketplace (OECM). Buchanan has been selected as an OECM preferred supplier partner to offer business IT Service Desk support and other technology services to Ontario's Publicly funded Broader Public Sector (BPS) Organizations. OECM helps Ontario's publicly funded organizations, including educational institutions, museums, and hospitals, achieve cost savings and increase efficiencies.
