- **Supports Android smartphone or tablet\* ver. 2.1x or above**

UrSOSButton

UrSOSButton™ is a lightweight discreet personal alarm button. It has been designed to give users an easy way to summon help in an emergency. Its' simple design means that even in a crisis it's easy to activate.

UrSOSButton™ works in conjunction with an Android Smartphone via Bluetooth. When activated UrSOSButton™ instructs your phone to send SMS text alerts containing a Map link to your location, GPS coordinates, Nearest Address and custom text/information to 5 nominated contacts. To further enhance your safety and security UrSOSButton™ can also automatically call 5 selected contacts.

Weighing less than 16 grams, UrSOSButton™ can be attached to a key chain or lanyard or popped into a shirt pocket and be barely noticeable. Its' simple design makes it easy to use discreetly and because of in-built vibration feedback no one would know when you've activated it.

UrSOSButton™ is there when you need it. It has an internal rechargeable battery which when fully charged can last up to a year or more and can activate an alert even when the screen is locked.
