THINK BIG!

Hassle-Free Tank Insulation

Banks Industrial Group provides you with a safe and reliable network of quality contractors and suppliers that specialize in above ground storage tank insulation and related industrial services.

Single-Source Service

We manage the entire process from start-to-finish, including: engineering, project management and resource coordination. You benefit from simplified paperwork, fast response and consistent quality, while avoiding costly subcontractor overlaps and multi-sourcing inconveniences.

Dependable Security

BIG is *fully insured, OSHA compliant and ISNetworld Certified A+* with documented safety conformance. Our crews are regularly trained, continuously certified, and subject to ongoing drug and alcohol checks—you can be sure they have the required qualifications to get your job done safely.

Engineered Solutions

Each insulation system is engineered to suit your exact operational requirements including tank dimensions, temperature, wind load, closure details and flashing.

Problem Solving Capability

BIG's comprehensive services give you rapid response to any unexpected challenges, such as CUI, that might be discovered during an insulation project. This capability helps minimize downtime by placing your assets back in service faster—and keep them in service longer.

How Can We Help You?

Please call us today, or use our website estimate form. We welcome the opportunity to assist you with recommendations, estimates and schedules.

Panels are positioned.

Clips anchor to cables.

Locking seam is formed.

Vertical-Panel Sidewall Insulation

Insulation panels consist of foil-faced polyisocyanurate foam laminated to a stucco-embossed, polyester-paint-finish, aluminum outer sheathing. Each panel is pre-manufactured to your exact tank height for quick installation and reduced labor costs. Sizes are 24-inches wide, with lengths up to the full height of your tank.

Innovative Design

Panels are secured to the tank by an internal cable and clip system that is anchored within a standing seam and then attached to horizontal cables applied circumferentially around the tank. This system holds firmly in place, while allowing for thermal expansion and contraction movements.

Superior Weather Resistance

Reduce maintenance expense! Machine-formed, double-locking, standing seams create a watertight seal with superior wind load resistance, and there are no exposed screws to leak or loosen.

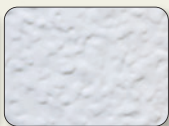

Higher Energy Efficiency

R-values can be matched to your exact thermal requirements. Our panels are constructed from the most technologically advanced materials available, resulting in less thickness required to meet desired performance. Foil facers on both sides and top edge of the foam create a moisture barrier and provide additional R-value by reflecting radiant heat. The closed-cell foam is also moisture resistant with <math><0.3</math> perm water vapor transmission and <math><1\%</math> water absorption. Optional inner-face layers extend temperature range.

Available

Tank Roofing

Our standing rib tank roofing systems provide weather-tight, corrosion resistant insulation that can expand and contract with thermal movements of the tank. These systems can be installed on various roof shapes and over a variety of insulation materials including: mineral wool, fiberglass, polyisocyanurate, cal-sil or perlite. Roof load compressive strength of 20-25 psi is higher than fiber, and allows foot traffic.

Standing-Seam Roofs

Radial, X, straight and tapered designs available. Optional non-welded roof plate attachments allow in-service installation.

Inspection Ports Available

Save time and money! Easily check tank wall and pipe condition for CUI—without removing the insulation. Many sizes are available for hot and cold applications. Installation is fast and no special tools are required.

Your Single-Source for Insulation
Maintenance & Repair Services

BIG's Comprehensive Service Range Helps Solve Your Daily Challenges

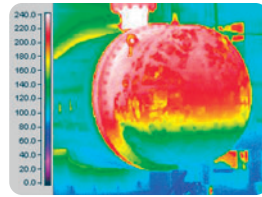

Insulation Repairs
Vertical, Horizontal & Foam
We Can Fix It
Start-to-Finish Service

Pipe Insulation
Metal Jacketed Fiberglass,
Foamglas, Calcium Silicate &
Specialized Lag Seal Options

Insulation Blankets
Removable for Maintenance
and Inspection of Flanges,
Valves, Pump Boxes, etc.

Energy Management
Certified Insulation Energy
Appraisals ♦ Fuel Savings
Reduced Emissions

Ductwork Insulation
Certified Techna-Duc® Installers
Maximum Thermal Efficiency
Strong & Durable

Belzona® Solutions
Corrosion Repair & Protection
Pump Coatings ♦ Tank Linings
Heat Exchanger Coatings

CUI Repairs
Hidden CUI Threatens
Shutdowns and Product Loss,
We Can Find It, We Can Fix It!

Tank Base Sealing
Prevent Floor Corrosion
Reduce Contamination Risk
Fast Installation ♦ Durable

Joint & Seam Repairs
Prolong Asset Life ♦ Save Money
Emergency Leak Sealing Using
External Bonding

Plate Bonding
Repair of Thin & Through-Wall
Damage to Metal Structures
Fast Application

Tank & Vessel Linings
Protect From Internal Corrosion,
Resists Explosive Decompression,
Disbondment & Chemicals

Containment Linings
Repair & Protect Sumps, Pits,
Channels & Stands to Resist
Chemical Attack

Vessel Support Repairs
Repair and Protection of
Metal & Concrete Supports
for Pipes & Vessels

Safety Crossovers
Unlimited Configurations
Bolt Together ♦ No Welding
Fast Delivery & Assembly

Yellow Gate
16" to 36" Adjustable Length &
Swing ♦ Universal Mount for
Walls, Pipe, Angle Iron, Tubing

ROLLAStep
Mobile Ladders & Platforms
Lightweight, Easy to Roll
Modular Options Available

Soil Line Pipe Corrosion
Repair of Thin or Through-Wall
Damaged Pipe to ISO, ASME &
US DOT Code Standards

Pipe Leak Repairs
Fast Solutions to Repair and
Strengthen Pipes Damaged by
Corrosion or Abrasion

Flange Face Repairs
Fast Repair and Protection of
Damaged Flange Faces at a
Fraction of Replacement Cost

Pump Repairs
Rebuild & Protect Pumps
Damaged by Corrosion,
Chemicals & Abrasives

Mechanical Services
