

Vulnerability Management

Tomorrow & tomorrow & tomorrow.

Vulnerability isn't a momentary problem, and your security posture can't be a set-it-and-forget-it effort. The strongest networks approach security with an ongoing and responsive strategy.

Novacoast's Vulnerability Management Services provide a comprehensive approach to maintain the integrity of your network now and going forward.

Novacoast Vulnerability Management Services consist of:

- SOC Services

We conduct automated weekly scans and regular deployment of updates and new systems along with analysis of information for context-based scoring of issues.

We also provide regular reports presented in an executive dashboard with prioritized recommended action and highlighted trends over time.

- Penetration Testing

Novacoast has been pioneering pen-testing for 18 years, keeping in-step with hacking techniques to probe for vulnerability.

We offer internal, external, application and internet of things pen testing, as well as social engineering.

- Engineering Services

We have the technical expertise and security experience to integrate any solution or toolset into your network. We offer full integration with build and patch management.

Novacoast also offers development services for designing and customizing your information dashboards.

- Advisory Services

Novacoast will assess the current state of your security posture and help build a strategy for maturing your processes, tools and reporting practices.

What's your plan
