Geocoding

Convert addresses to locations

Google's geocoding engine powers the translation of an address into its exact geographic coordinates.

The address "1600 Amphitheatre Parkway, Mountain View CA" becomes a map marker at latitude 37.423021 and longitude -122.083739.

Places API

Connect people with places

Access a database of over 100 million points-of-interest (POIs). Autocomplete provides type-ahead location-based predictions for POI search. Enter the first few digits of an address or POI, and Autocomplete will fill in the rest.

Searching for a POI, such as "library" brings up libraries in the area based on the user's unique location. Typing "123" will recommend complete addresses in the area, such as "123 Main St. Santa Monica, CA 90112."

Directions API

The best way to get from A to B

Calculate the best route depending on traffic and choose from a list of the best results. Customize to avoid highways or tolls, and with SADA Systems' custom directions webservice, draw specific roads or regions to avoid within a given period.

See a list of the options for the best driving walking, cycling, or public transit route between two locations.

Distance Matrix API

Measure distance by time

Calculate travel distance in relation to Google's Road Network to understand how long it will take to get from A to B. Calculate expenses based on travel time with SADA Systems' custom batch web service.

Find out which POI is actually closest to you by translating straight line distance into road miles and travel time.

Roads API

Visualize past routes

Collect GPS data and plot an accurate visualization of a previous trip. Snap to Roads finds the best-fit road based on the collected GPS data points. Other details are provided, such as speed limits for a road segment.

Combine GPS data points collected from a previous trip with Google's Road Network to more accurately calculate the traveled route.

Street View API

See your destination

Customize the familiar Google Maps Street View, used by billions of users a month, to build on what is being displayed.

Add popup windows, movie scenes or even games to Google Maps Street View.

SADA Google Maps Customers

Founded in 2000, SADA Systems, Inc. is a privately-held global leader in providing cloud computing and strategic IT solutions to organizations worldwide. SADA is a Google for Work Premier Partner focused on creating tools, methodologies, change management and business transformation strategies for the cloud.

Named the 2014 Global Partner of the Year for Google Maps and 2013 North America Partner of the Year for Google Maps Large Accounts, SADA Systems has a proven track record and competency in the implementation of Google Maps for Work services and solutions. Our award-winning Google geospatial team will work with you to determine the best solution to meet your business objectives.
