Azima DLI and Air Liquide Renew Predictive Maintenance Agreement

Ground-Breaking Maintenance Program Provides C-Suite with Important Return on Investment Data While Drastically Reducing Critical Machinery Repairs and Unplanned Downtime

WOBURN, Mass. – June 28, 2011 - Azima DLI, the leader and premier provider of Predictive Maintenance (PdM) products and analytical services, today announced details of its expanded predictive maintenance agreement with Air Liquide Large Industries U.S. LP (Air Liquide) that includes more than 112 facilities in the United States. Air Liquide is a member of Air Liquide Group, the world leader in gases for industry, health and the environment.

Azima DLI's WATCHMAN Reliability Portal™ provides critical machinery condition information preventing unplanned downtime or machinery damage. Furthermore, Azima DLI's cloud-based portal provides comprehensive operations and makes machinery health information readily accessible to all corporate stakeholders – from plant managers to the executive suite – so operations can be viewed, managed and assessed easily.

“Our business need was creating a uniform methodology for ensuring that our operations met our customers’ expectations for reliability, safety and uptime,” said Russell Johnson, Vice President of Operations Support for Air Liquide Large Industries. “We want our plants to operate within a standard framework so that data from any one facility can be viewed and analyzed quickly by employees with an Internet connection.”

Azima DLI's web-based WATCHMAN Reliability Portal provides view-level access to Air Liquide's machine condition analysis program database. The maintenance staff uploads program statistics, machine-detailed analysis and health history information, either remotely or through any Internet-enabled device, and Azima DLI's experienced vibration experts analyze the data to ensure machines run optimally across all its sites.

In addition to world-class vibration analysis, Azima DLI provides Air Liquide with advanced reporting that reflects valuable ROI and Composite Risk Index (CRI) information. Maintenance professionals often struggle to provide substantive, quantifiable data that showcases the value of their work. Azima DLI's reporting capabilities highlight cost savings and risk reduction– in terms of increased productivity and reduced downtime and overall equipment health improvement – so executive management understands the impact of the program on the company's long term operational goals.

“Air Liquide is a visionary company in many ways, and especially in their innovative use of advanced PdM technologies and processes,” said Azima DLI CEO Burt Hurlock. “We are grateful for the opportunity to continue our work with Air Liquide, and to continue our collaboration in the development of ground-breaking performance metrics that serve the needs of both production operations and executive management. Pushing the efficiency frontier in production operations has become an industry-wide challenge. Azima DLI is dedicated to helping Air Liquide, and others, implement state-of-the-art predictive technologies that

eliminate unplanned capital expenditure, and minimize unplanned down-time and maintenance spending.”

About Air Liquide Large Industries U.S. LP

Air Liquide Large Industries U.S. LP is a member of Air Liquide Group, the world leader in gases for industry, health and the environment. Air Liquide Group is present in 80 countries with approximately 43,000 employees. Oxygen, nitrogen, hydrogen and rare gases have been at the core of Air Liquide’s activities since its creation in 1902. Using these molecules, Air Liquide continuously reinvents its business, anticipating the needs of current and future markets. Air Liquide innovates to enable progress, to achieve dynamic growth and a consistent performance.

About Azima DLI

Azima DLI is the leader and premier provider of predictive maintenance products and analysis services that align with customers’ high standards for reliability, availability and uptime. Azima DLI’s WATCHMAN™ Reliability Services utilize flexible deployment models, proven diagnostic software and unmatched analytical expertise to deliver sustainable, scalable and cost-effective condition-based maintenance programs. The company’s offerings enable customers to implement comprehensive, predictive maintenance programs that ensure asset availability and maximize productivity. Azima DLI is headquartered in Woburn, Massachusetts with offices across the U.S. and international representation in Asia-Pacific, Central America, Europe and South America.
