

# Macquarie Bank Global Headquarters

## Project Review December 2014

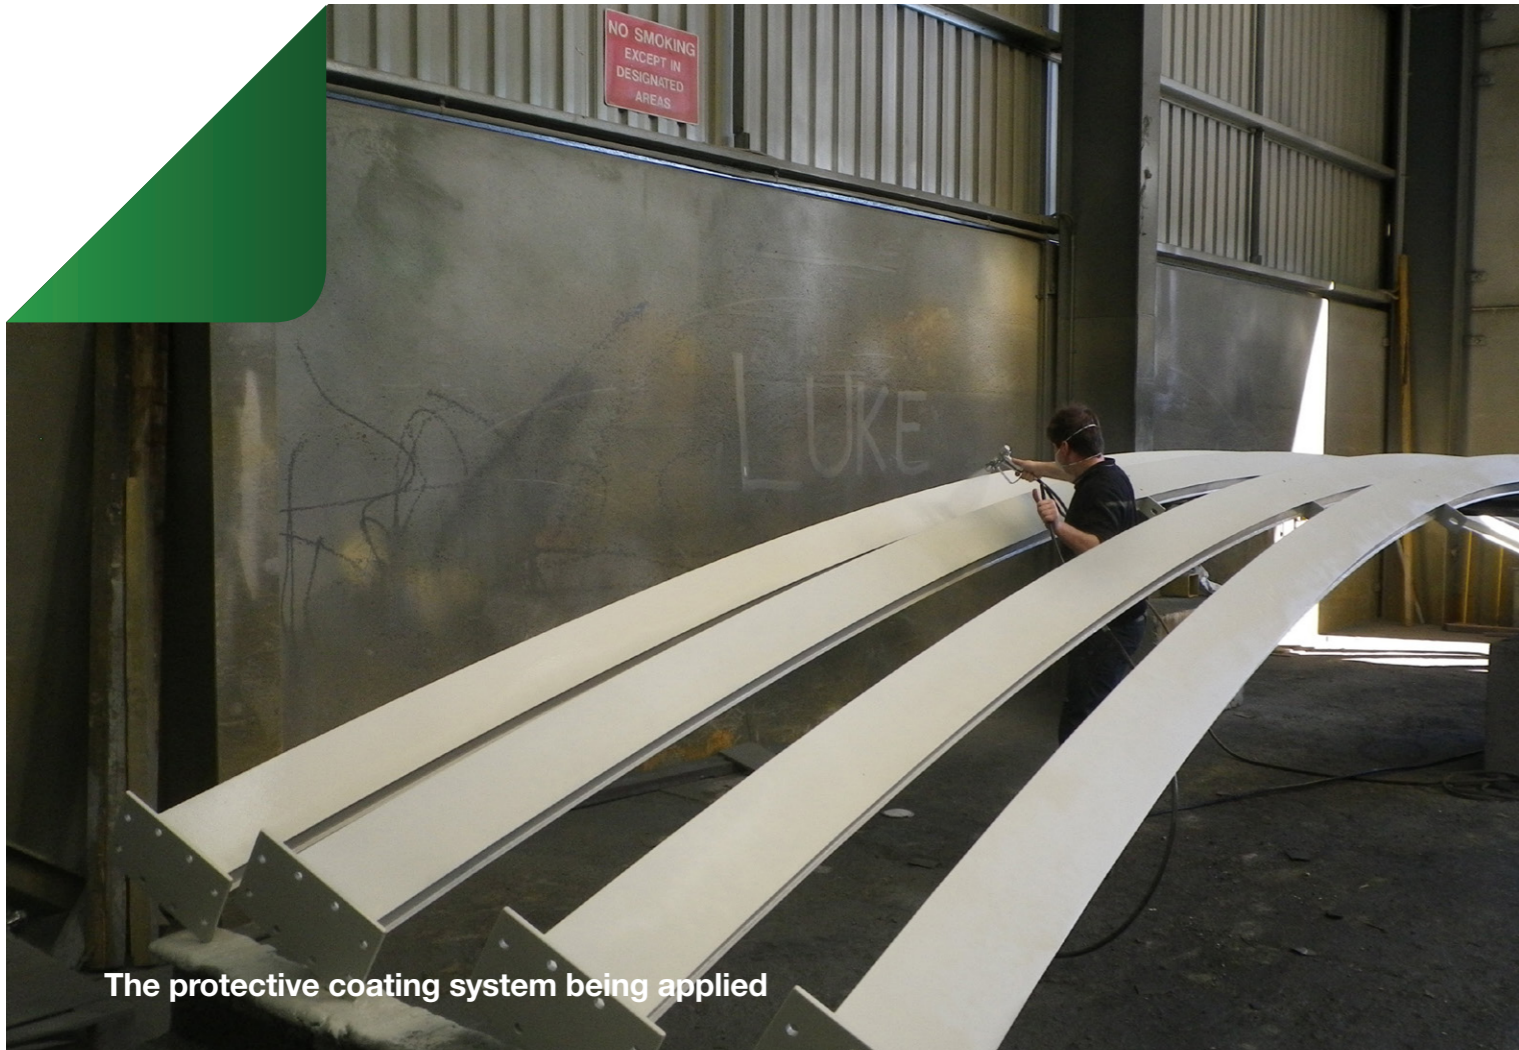

### Overview

The new Macquarie Bank global headquarters in Martin Place Sydney, displays the transformation of an older heritage asset into a 20000m<sup>2</sup> state of the art modern workspace. A large and unique steel and glass atrium crowns this building providing a light filled interior, along with conference facilities and client meeting spaces overlooking one of Sydney's prime civic spaces.

A&I Coatings role on this project was to supply a protective coating system for the atrium steelwork, which would be long lasting and aesthetically pleasing. The coating technology chosen was a fluoropolymer coating system because of the unsurpassed colour and gloss retention and corrosion protection of fluoropolymer coatings. In addition to that A&I was able to provide a certified low VOC coating solution for this 6 star green star project.
