

# OpenAthens for Business

“It provides us with all the functionality we need, is easy and straightforward to use and the customer support is excellent.”

OpenAthens corporate research customer, NPS survey feedback, Spring 2015

# Connect your users to resources securely

OpenAthens simplifies access to your organisation's electronic resources. By integrating with your existing single sign-on system, your users get access to all your subscribed resources using their network login.

## OpenAthens is...

### ✔ Designed for librarians

OpenAthens acts as a broker between your systems and the publishers you subscribe to. This allows your users to have seamless single-click access and discourages account sharing.

Configure OpenAthens once and let us manage the connections to all your subscribed resources. There's no need to setup tricky connections with each publisher, OpenAthens saves time, IT resources and money.

Administration tools are librarian-orientated, making it quick and easy to manage accounts and introduce new resources. OpenAthens comes with a customisable user portal, MyAthens, which provides quick links to resources and the option to add useful content such as discovery service search boxes or library opening hours.

### ✔ Flexible

OpenAthens is compatible with a range of SAML IdP software and can integrate with your organisation's local directory, making library resources another application that works with your own set of usernames and passwords.

### ✔ Powerful

OpenAthens provides flexible control for you to granularly manage access rights so different user categories get access to the specific set of resources they need for work or research.

Comprehensive usage statistics show how often content is accessed and by whom, so you can assess the value of your subscriptions and cross-charge across business departments easily. Statistics are available at a user, category and organisational level.

### ✔ Secure

OpenAthens ensures only authorised users can access your subscribed content. Integration with a user's network account prevents sharing of their account details.

## How we can help you:

- ✔ **Adhere to compliance** – safeguard against password sharing by using your network accounts.
- ✔ **No additional accounts** – integrate with local directories for true single sign-on.
- ✔ **Worldwide access** – easy to set up and manage multiple user types with multiple access levels for international organisations.
- ✔ **Increased engagement** – cut number of queries and complaints as more users connect to more resources more often.
- ✔ **Fast access** – cut resource access time from minutes to seconds.
- ✔ **Minimal admin** – easy tools for resource allocation and account management.
- ✔ **Attribute cost** – comprehensive user statistics ensure library resources are charged to the right departments and accessed by the right people.
- ✔ **Fully supported** – first-class, experience-based advice and support.
