

## **Software Engineer – UI Job Description**

RiverMeadow is looking for enthusiastic and motivated people who want to be right in the middle of not just cloud computing, but multi-cloud agility. You will be a member of our product development team, working on exciting new products that have the potential to change the market dynamics among cloud service providers, and be an integral member of a team building first-of-their-kind cloud applications.

As part of the UI Engineering team, you'll work directly with designers and back-end engineers in a dynamic, open environment, employing the latest techniques and best practices in front-end engineering, and utilizing the latest in UI tools and frameworks building the front-end for scalable, enterprise-class, SaaS applications for the cloud.

You are highly motivated and passionate about your work, and can easily communicate your ideas. But you also have the sensibility to listen to input from a variety of sources, be they creative or technical. And as a true team player, you know you can't do it alone. While you have a dogged determination to get the job done, you won't compromise on the quality of your work.

### **Required Skills and Experience:**

- 2+ years hand-coded HTML, CSS, JavaScript
- 2+ years object-oriented JavaScript
- 2+ years HTML5 and CSS3 layout
- Direct experience working with a JavaScript MVC engine (BackboneJS preferred)
- Demonstrable experience developing against a RESTful API
- Source control via Git, SVN, or CVS is a must-have

### **Desired Skills and Experience:**

- Working knowledge or familiarity with UML or other object-oriented analysis/design methodology
- Experience contributing to and developing against an architecture
- Agile development
- Technical documentation

Pay is commensurate with experience, and highly competitive.

### **About RiverMeadow Software Inc.**

RiverMeadow Software, Inc. is a privately held company headquartered in San Jose, CA. RiverMeadow solves the toughest challenges of migrating workloads to the cloud. The RiverMeadow Cloud Migration SaaS is an extensible, adaptable migration platform that automates workload mobility into and between clouds, enabling users to migrate workloads to the cloud, between cloud instances, and cloud service providers (CSPs) with ease.

We develop SaaS solutions for rapid cloud migration. Our products automate the process of moving live servers "as-is" (physical, virtual and cloud based servers) into public, private and hybrid cloud environments. Without templating, replication, scripting or other manual methods, our RiverMeadow Cloud Migration SaaS automates the process from start-to-finish, in less time without the need to install agents or quiesce servers until final cut over. Our RiverMeadow SaaS enables Carriers and Cloud

Service Providers to quickly, easily and cost-effectively deliver the benefits of elastic cloud computing to enterprise and SMB customers.

By taking cost and complexity out of the migration equation, RiverMeadow places focus on what really matters, growing and running the most effective and cost efficient business possible. Enterprises and SMBs are able to focus on the big picture strategy of optimizing their business in and around the cloud while Service Providers are able to focus resources toward delivering products and services that align with the cloud computing strategies of their customers.

RiverMeadow Software employees are talented, motivated, passionate people. Keen on work and play, we embrace challenges, are dedicated to quality and thrive in the dynamic, energetic, collaborative atmosphere we've created. If you are driven to excel in your career, RiverMeadow offers unique opportunities to contribute and grow.
