

AppFusion for BlackBerry Good Dynamics

QUICKLY AND EASILY INTEGRATE GOOD DYNAMICS TO YOUR MOBILE APP

AppFusion from AppDome allows Good Dynamics SDK to be seamlessly added to existing applications without the need to utilize developers or having access to the source code without writing a single line of code.

AppFusion is a flexible and reliable replacement for Good Dynamics app wrapping technology, which is end-of-life. Like Good Dynamics app wrapping, AppFusion is an easy alternative to implementing the Good Dynamics SDK. Unlike app wrapping, AppFusion is OS-independent, supporting both Android and iOS Apps and is able to integrate with a broad array of app and mobile app development platforms.

AppDome AppFusion integrates the Good Dynamics SDK so the Good SDK can be deployed in minutes. Customers can manage and configure EMM features directly from the Good Control management interface just as though a developer had spent months integrating the SDK into the source code.

AppFusion for Good Dynamics enables these EMM features to be added to existing enterprise apps:

- App provisioning
- App and device management
- Security
- Compliance policies
- Rooted/jailbroken detection
- Wipe/lock control

SIMPLIFY EMM PROOF OF CONCEPTS

Instead of waiting for the Good Dynamics SDK to be integrated by a mobile developer into pilot applications, non-developers are able to integrate the Good Dynamics functionality in minutes, allowing a proof of concept to proceed in days instead of weeks or even months.

RAPIDLY ADD APPS TO ENTERPRISE MANAGEMENT

Blackberry Good Dynamics customers can manage new apps without waiting for internal development cycles or paying for external development resources.

ADD EMM WITHOUT ACCESS TO SOURCE CODE

Blackberry Good Dynamics customers are able to add enterprise management and control to apps that they own or have permission to fuse, without needing access to the source code of the mobile app.

IMPLEMENT EMM/MAM WITHOUT WRAPPING

AppFusion allows customers to apply security and usage policies to mobile apps without requiring any changes to the app's source code, and without using time-consuming, inelegant app wrapping that can impact reliability, compatibility, performance and operational integrity.

AppFusion from AppDome delivers a real alternative to embarking on the development effort associated with integrating an SDK. AppFusion offers an easy, functional and reliable alternative to both app wrapping and SDKs.

THE APPFUSION PROCESS

AppFusion from AppDome offers enterprises the ability to fuse new features and new capabilities into existing enterprise apps on iOS and Android by uploading the final package (IPA/APK) to the AppFusion platform. The cloud-based fusion process is done automatically within minutes, enabling the fusion of Good Dynamics EMM functionality and – optionally – SAP and Xamarin Mobile Application Development Platform (MADP) compatibility. The fused app can be distributed and managed by the Good Control management system.

USE CASE 1:

APPFUSION FOR GOOD BLACKBERRY - EMM

After fusing the Good Dynamics SDK into an app, customers can manage the app using the Good management console. All the features of the latest version of the Good Dynamics SDK are available using AppFusion and can be added directly to mobile apps without requiring a development cycle or interacting directly with the SDK itself.

USE CASE 2:

APPFUSION FOR GOOD-BLACKBERRY AND SAP (MADP + EMM)

AppFusion is integrated with SAP's Mobile Development platforms as well as with Good Dynamics SDK, resulting in a fully integrated end-to-end mobile development, management and security environment. SAP Mobile Secure is used as the central console for developing and deploying Fiori® apps. Those apps can be enhanced directly from the Mobile Secure console by selecting the provider AppFusion for Good Dynamics. AppFusion for Good Dynamics can be deployed quickly and consistently, without changing the development workflow, without writing new code, and without integrating SDKs.

AppFusion for Good Dynamics vs Good Dynamics SDK

AppFusion	SDK
Zero impact on functionality & performance	Impacts app functionality & performance
Supports all mobile development platforms	Supports a limited number of development platforms
Seamless App Fusion within minutes	Weeks or months of integration
Cross platform (IOS & Android)	Different code for each platform
Without code integration	Code integration needed
Some features/functionality that require full integration of the SDK	Complete control over application features and functionality

Blackberry and Good SKUs

Blackberry SKU	Description
SPA-59205-021	AppDome AppFusion - 5 apps - Annual Subscription
