

Bundled Connectivity Solutions from KORE and Digi International: 4G LTE Wireless Failover

In today's competitive economy, the importance of continuous network connectivity cannot be underestimated. Costing businesses approximately \$26.5 billion annually, episodes of service interruptions are highly unpredictable, and the results are often disastrous.

Causes of Network Outages:

- Natural disasters
- Cyber security hacks
- Road work and construction
- Periodic, planned maintenance
- IT mistakes

Effects of Network Outages:

- Disruption to routine and emergency network maintenance
- Inability to accept POS transactions
- No access to VoIP phones or e-mail
- Lapse in critical data back-ups
- Customer dissatisfaction and damage to brand reputation

As more and more mission-critical applications are stored in the cloud, it is becoming of increasing importance for IT professionals and business owners alike to consider and implement a failover solution.

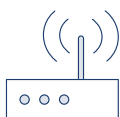

KORE and Digi's end-to-end 4G LTE failover solution ensures business continuity by providing protection against costly network outages and increasing network availability to 99.99%. This comprehensive offering bundles cellular-enabled routers with cellular connectivity, so that in the event of a primary internet or landline failure, cellular data is converted to Ethernet for a seamless failover to 4G LTE.

Solution Overview

KORE and Digi's bundled, turn-key solution combines:

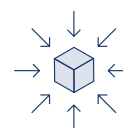

4G LTE Cellular Connectivity from Verizon, AT&T or T-Mobile

Choice of best-in-class cellular-enabled routers from Digi

Professional Services and Monetization Services

PRISMPro Connectivity Management Platform

Ideal for These Verticals:

Retail & Hospitality

Financial Services

Healthcare

Security

Features & Benefits

Reduce downtime costs with our streamlined solution.

99% Network Availability and Reduced Cost of Downtime

Enterprise-Class Security

Plug-and-Play Shipment for Quick Speed to Market

Single Partner for Solution and Support

Customizable Solution to Meet Unique Customer Requirements

DIGI™

DIGI TRANSPORT LR54 ROUTER

- Advanced LTE capability
- Automated failback between Ethernet, cellular (dual SIMs) and IPsec tunnels
- Advanced security features
- Industrial grade, rugged construction

DIGI TRANSPORT WR21 ROUTER

- Global 4G LTE support
- Enterprise software supporting advanced routing protocols, VPN, and stateful firewall if needed to be used as primary appliance
- Advanced features allow PCI compliance

DIGI TRANSPORT WR11 ROUTER

- Compact 3G/4G LTE networking platform
- License-free enterprise software supporting advanced routing protocols
- Dual SIMs provide redundant connection

Agents will receive a one-time payout for each device sold in addition to a percentage of residual monthly revenue
