

Project Manager

KORE Wireless – Winnipeg, MB

Are you a Certified Project Management professional with a background in technology? If you enjoy being hands on with engineering and product teams, you may be the person our team needs. We are seeking an organized and time-sensitive individual to join our team in Winnipeg, MB as a **Project Manager**.

This is a unique opportunity to gain experience in the fastest growing technology field. The role of the Project Manager is to manage the coordination and scheduling of resources to meet project milestones and deliverables. In conjunction with the KORE's Development Team and Product Management Team, the Project Manager will conduct frequent internal and external meetings to keep projects on schedule. They will work with KORE's Product Management team and other experts to help define requirements and drive the execution of the technical roadmap for both internal and external customers. The Project Manager will also develop best practices and accompanying documents to drive KORE's project management processes and procedures.

.KORE is truly an International leader delivering connectivity in all seven continents and has been recognized as a Connected World Top 100 Company. We offer the opportunity to be part of the largest independent machine-to-machine (M2M) network services company in the world. The M2M market has worldwide revenue growth projections in excess of 20% per annum with a billion connections forecasted by 2020. It is likely that M2M will touch everyone's life every single day and in many ways - from applications ranging from connected vehicle applications to managing smart household appliances to managing your health and the cost of your utilities.

Responsibilities of this position include:

- Work together with Product Management to plan and execute projects
- Ensure that projects remain on target to meet deadlines
- Drive the project management process of effective implementation
- Work closely with external product owners
- Conduct internal team and external meetings, as required
- Create and maintain company Project Management best practices

Skills and Qualifications:

- Bachelor's degree in Computer Science or a related field
- Certified Project Management Professional (PMP)

- Experience with Scrum/Agile/Waterfall methodologies, CSM or CSPO certifications are a plus
- Minimum of 5 years in Project Manager role in a software/technology/development organization
- Visio experience and experience with mock-up/prototyping is a plus
- Broad, high level technical knowledge of the following:
 - Front-end vs back-end development
 - API, Web Services, WSDL
 - Synchronous vs asynchronous
 - VPN
- Experience working within a multi-vendor and/or remote office environment
- Demonstrated project management, time management, and problem solving skills
- Commitment to support corporate initiatives and guidelines
- Willingness to investigate software environments and technical issues
- Excellent command of verbal and written English; multilingualism is an asset
- The ability to thrive in a high paced and, at times, high pressure environment
- Must be willing to fly to customer locations from time to time to participate in onsite discovery and project management programs
- Must have the ability to work adjusted work hours, when required, to support international customers
- Demonstrates our core competencies of customer focus, integrity, initiative, innovation, collaboration and results orientation
- Ability to legally work in the United States

Please apply for consideration by emailing your resume to careers@korewireless.com
 While we appreciate the interest of all candidates, only those individuals selected for an interview will be contacted.

KORE provides equal employment opportunity for all persons, in all facets of employment. We maintain a drug-free workplace and perform pre-employment background checks.
