

Algorithmic Detection of Infections Within Senti7

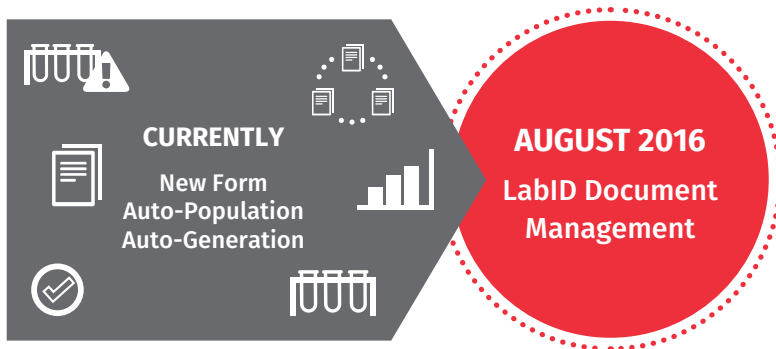

Senti7® is committed to streamlining the workflow of infection preventionists to minimize time spent on documenting and reporting events to NHSN, and maximize their time preventing infections.

We are introducing algorithmic detection to Senti7, beginning with automating the LabID identification and reporting workflow.

ALGORITHMIC DETECTION

CURRENT STATE

Benefits:

- Reduce or eliminate time spent on identifying LabID Events
- Automatically apply business logic, such as 14-day rule, to eliminate unnecessary LabIDs
- Direct CDA enables one-click reporting using NHIN protocol
- Free up more time for preventing infections, rather than documenting and reporting
