

# eXos Unified Communications

## eXos Solution

eXos Unified Communications by OSIbeyond is a fully integrated solution based on Skype for Business application. eXos Unified Communications expands on OSIbeyond's Software as a Service (SaaS) cloud platform and includes hosted Exchange email, meeting and collaboration, and voice over IP (VoIP) telephony.

---

## Communicate Across Devices

### Integrated Experience

Get all your communication and collaboration in one place. No need for multiple apps and solutions — one client, one set of sign-in credentials. All with a familiar experience that invites people in.

### Cross-Platform Support

Connect to your team anywhere, using Skype for Business apps on Android, iOS, Mac and Windows, in browsers, and on compatible IP Phones.

### Presence, Location, Contact Card

Know who's online, where they are, and how to reach them. Rich presence tells you who is available, and contact Cards appear throughout Office apps letting you communicate with anyone - from whatever you're working on.

### Communicate Within Office Apps

Collaborate right within your Office documents using IM, screen share, talk or video chat. Schedule meetings and see IM history in Outlook, and start meetings from apps like Word and PowerPoint to present whatever you're working on.

---

## Complete Meeting Solution

### One Solution for Every Kind of Meeting

Audio, video and web conferencing are combined in one user experience and a unified platform, with the ability to schedule a meeting in Outlook or start one in real time.

### Universal Audio Conferencing

Join over the Internet with smartphone, tablet, PC or browser, or join via telephone.

### Multi-Party HD Video

Make video a more natural part of everyday business and collaboration, with 1080p resolution, conference sizes of up to 250 participants, and up to 5 people shown live simultaneously.

### Content Sharing

Focus on the things you're doing together, even when you're far apart, with integrated real-time co-authoring, desktop sharing, application sharing, and PowerPoint presentations.

### Expand Your Reach

Include anyone in a collaborative meeting, even if they are not a Skype for Business user, with anonymous access on a browser or smartphone, and reach thousands in webinar and town-hall style meetings with Meeting Broadcast.

### Unified Meetings

Unified Meetings provide audio, video, and web conferencing on the Internet, with the ability to schedule a meeting in advance or start one at any time. Up to 250 people can join a meeting, using the smartphones, tablets, PCs, phones, and meeting room devices.

### Single Touch Join

Join easily with a single touch or click from your calendar, meeting reminder, or the Skype for Business client.

### Dial-In Conferencing

Dial-in conferencing allows anyone to join your meetings using only a telephone. Useful for joining anytime a phone is more convenient than a tablet or PC, or anyplace without Internet access.

### Local Dial-In Numbers

Easily join using the dial-in number automatically included in every meeting invite, and choose a local dial-in number in many countries around the world to reduce calling charges.

### Easy Dial-Out

Add a person to a meeting in real-time simply by typing their phone number.

### Meeting Roster and Controls

Use the Skype for Business meeting roster to see who has joined your meeting over the Internet and via phone, to see who's speaking, and to mute people in noisy environments if needed.

---

## Voice over IP (VOIP) Telephony

### Anywhere Access

Make, receive, and transfer business calls in the office, at home, or on the road, using compatible IP phones, mobile phones, tablets, and PCs.

### Rich Calling Features

Easily transition from your old phone system to eXos Unified Communications with the voice features you use every day and some you've always wished you had. Answer, transfer, hold, and resume with a touch. Make and take calls on behalf of others. Dial-by-name. And instantly transform a basic call into a collaborative session with text, video, and desktop sharing.

### Cloud PBX

Cloud PBX provides the features you need to eliminate traditional PBX systems and the associated costs.

### Common Calling Features

Transfer, hold, and resume calls with a single touch. Let your assistant receive calls on your behalf. Answer calls for other people on your team when they're unavailable.

### Voice Mail

Take advantage of built-in voice mail, integrated with Exchange, to quickly respond to missed calls.

### Encryption by Default

Protect your privacy and your intellectual property with built-in encryption, enabled by default. No VPN needed.

### Person-to-Person Calling

eXos Unified Communications provides voice-over-IP (VoIP) calling over your network and the Internet to users in your company and Skype for Business users in other companies. Users can easily add video or content sharing to any call.

### Dial by Name, From Office

Reach people easily, when you need them, with a single touch or click from your contact list in Skype for Business, or the contact card in any Office application.

### Unified Connectivity

Connect, communicate, and collaborate with colleagues, other organizations, with both voice and HD video.
