

Keeping Microsoft Windows Server 2003 After July 14, 2015?

Your Business' IT Infrastructure may be vulnerable.
But don't fear; Dataprise can help!

**LET'S MAKE
IT STRONG**

Here's What to Expect if You Still Have Windows Server 2003:

NO UPDATES

Microsoft will no longer develop or release any updates after ending support. To put this in perspective – 37 critical updates were released in 2013 for Windows Server 2003/R2 under extended support. Imagine what impact zero updates would have on your infrastructure.

01

NO SAVINGS

The costs of maintaining your legacy servers can up quickly. Maintenance costs for aging hardware will likely increase, and you will have to deal with added costs for intrusion detection systems, more advanced firewalls, and network segmentation – all simply to isolate 2003 servers. Staying put will cost more in the end.

02

NO COMPLIANCE

After support ends, your organization will likely fail to meet most industry compliance standards and regulations. This could result in lost business or dramatically increase the cost of doing business in the form of high transaction fees and penalties.

03

NO SAFE HAVEN

Without continued support, your virtualized and physical instances of Windows Server 2003/R2 will not pass a compliance audit. Microsoft Small Business Server (SBS) 2003 will also be affected.
