

## CheckMate 14 Short-Keys

### Graphical Program Manipulation

Description	Hot Key	Procedure
Move CheckMate Entities in the Graphics area.	shift	Hold Shift Key and pick entity. Let go and click again to drop it. (Applies to individual hits, plane tie-lines, circle normals, probe moves.)
Insert Probe Move Between 2 Features.	Ctrl-shift	Hold Ctrl-shift keys and select blue connector. Let go and click again at desired location.
Insert In-Feature Intermediate Probe Move.	Ctrl-shift	Hold Ctrl-shift keys and select yellow tie-line. Let go and click again at desired location.
Add a hit to an existing feature measurement.	Ctrl	Hold Ctrl keys and select yellow hit of an existing feature measurement. Let go and click again at desired location and a hit will now be added after the hit that you selected. (Applies to planes, circles, holes)
Insert a Probe move in the exact middle of the blue connector.	Ctrl	Hold Ctrl-shift keys and select blue connector. Let go and click. A probe move will be created in the exact middle of the blue connector.
Use the CMFLIP command.	Alt	Hold Alt keys and select measurement. Let go and CheckMate invokes the CMFLIP command.
Rotate an entire Circle/Hole Measurement.	Alt-shift	Hold Ctrl keys and select yellow circle/hole measurement. Move mouse to rotate entire measurement. Click again to finish feature rotation at the desired location.

## CMBrowser Editing – these functions are performed within the Programming Browser

Description	Hot Key	Procedure
