R&M Manufacturing announces that it added an AMADA EMK 3012 CNC Turret Punch with Tapping Capability

Buffalo, Minnesota, February 3, 2016/PR Newswire/ -- R&M Manufacturing, a US Company, announces that it added a new Amada EMK 3612 M2 CNC Turret punch to its fabrication department. According to Jeff Nelson, Operation Manager, the EMK-M2 includes four tapping heads and the ability to process 60" wide x 120" long sheets. R&M purchased the turret with the tapping option in response to customer requests to eliminate secondary operations for adding threads to their metal parts and enclosures

The tapping process is able to eliminate secondary operations for spot welding weld nuts, threaded hardware insertion and tapping. According to Nelson, "using the turret for tapping results in shortened lead times and productivity gains in lower costs".

R&M Manufacturing is a precision metal fabricator that offers tool and die design/build, progressive stamping, short-run stamping and fabricated metal components
