

Getting Started with TransArmor® PCI Rapid Comply® Trustwave Enabled

PCI Compliance Made Easy

Compliance with the Payment Card Industry Data Security Standard (PCI DSS) is mandatory and often confusing for merchants.

You have been set-up with an easy-to-use PCI DSS compliance program in PCI Rapid Comply® as part of the TransArmor® Solution from your merchant processing provider. This program will make it easier than ever for your business to achieve and maintain PCI DSS certification.

PCI Rapid Comply simplifies the PCI DSS process. It will help you complete the components required for compliance certification, which include a Self-Assessment Questionnaire (SAQ) and may include Network Vulnerability Scanning if required.

What is the PCI Self-Assessment Questionnaire (SAQ)?

The SAQ is a set of questions that you will complete to self-assess your data security posture, to ensure you are processing cards in a secure manner.

What is Network Vulnerability Scanning?

A network vulnerability scan is an automated, non-intrusive scan that assesses your network and web applications from the internet. The scan is designed to identify any vulnerabilities or gaps that may allow an unauthorized or malicious user to gain access to your network and potentially compromise card-holder data. (The scans provided by Trustwave will not require you to install any software on your systems.) The scans provided in this upgraded program will run every month.

Get Started

Before you begin, you'll want to gather your merchant statement, or any other document that includes your Merchant ID (MID). In addition, you may want to have any information on your POS device, software or any other information on the set-up for your payment-processing system. Then visit register.transarmor.com.

PCI Rapid Comply Wizard

You will be presented the option to follow the PCI Rapid Comply wizard or to complete the PCI DSS certification forms. If you are new to the PCI DSS certification process, choose the Step-by-Step wizard. This process will help you through the correct Self-Assessment Questionnaire (SAQ) based upon how you process your transactions without presenting you with complexity that does not apply to your business. Because PCI Rapid Comply customizes your experience, your next steps will be unique to your environment.

Completing the questionnaire may take multiple attempts, especially as compliance gaps are found that need to be fixed. Once you have successfully passed each section, you will have a compliant SAQ on file. You can print and access copies of your Certificate of Compliance, completed SAQ and attestation form. At any time during the process, help is available in the portal.

Protect the success you've worked so hard for.

To Do List

As you use PCI Rapid Comply®, anything that needs to be resolved will be tracked in the To Do List. The To Do List flags the actions you must take to fix weaknesses in your system that are causing risk to your data security. As each item is added to the list, you'll be able to read more about the risk and how to resolve each issue. Once you complete the items, you can easily check them off and adjust your assessment to be compliant.

Scanning

If you have an Internet connection for your business that connects to any systems that store, process or submits credit card data, scanning is required for business. PCI Rapid Comply will help you determine if you need scanning. PCI Rapid Comply will take you through a scanning set-up wizard to help you select the right public-facing IPs and website addresses to scan. After each monthly scan is complete, you'll need to login to view your results. You are required to complete a scan without any detected vulnerabilities to pass the scan. To be compliant, you must pass the scan quarterly and have a compliant scan report on file in PCI Rapid Comply.

* Please note, vulnerability scanning is not required of all businesses.

If you have questions about using PCI Rapid Comply, completing the SAQ or scanning, please click the support link in the upper right-hand corner for information on how to connect to support by email and phone.

POS Software Monitor

The POS Software Monitor is a component of the TransArmor® Solution. It enables some advanced features by extending security and compliance services to your systems.

These advanced features include:

- File Integrity Monitoring
- Anti-Virus Software
- Credit Card Data Storage
- POS Scanning
- Unauthorized Device Monitoring
- Security Configuration Monitoring
- Security Health Check
- Trusted Commerce Seal

To install POS Software Monitor, click on the POS Software Monitor icon to download.
