

# EXTRACT DATA

## Insights Faster

With Hybrid Transactional Analytical Processing (HTAP), companies can capture data insights in real-time.

Data is growing at exponential rates. Businesses of all sizes and in all industries must find ways to turn swarms of data into profitable insights.

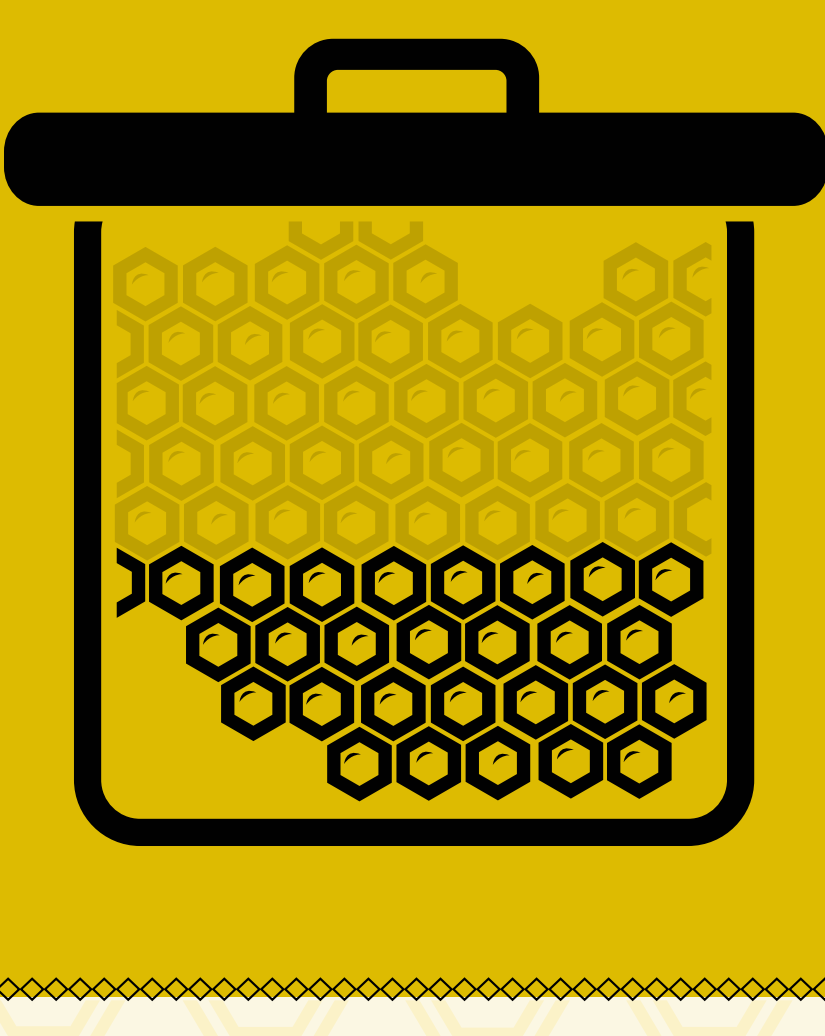

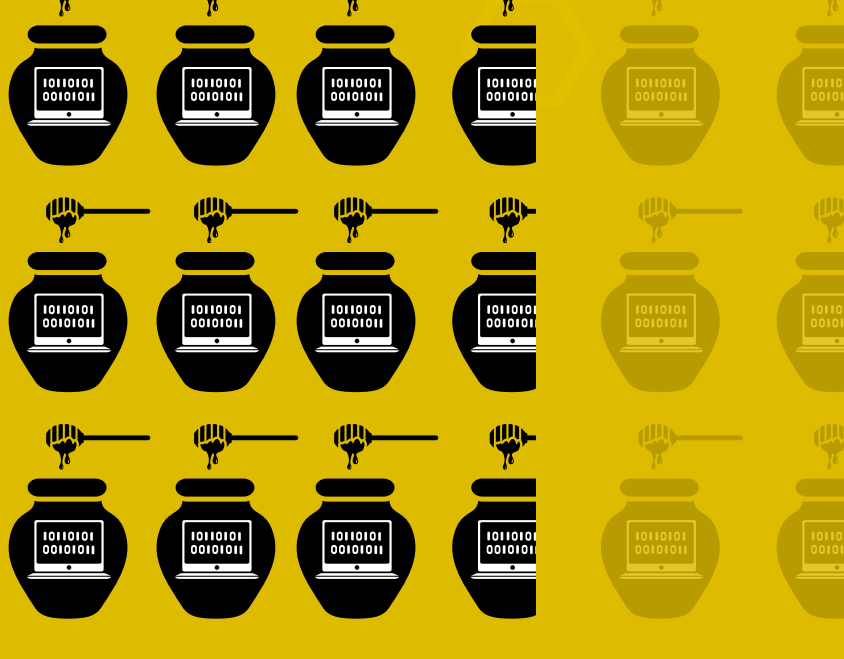

# 90%

90% of the world's data was created between May 2011 and May 2013.

# 58%

58% of companies stated that Big Data is a challenge for them.

# 40%

40% of executives said that the speed at which their organization processes data has increased significantly over the past 12 months.

## Analyze Data as It's Captured

Data stored in our database can be analyzed in real-time. As a result, reporting is:

ACCURATE

COMPREHENSIVE

ACCELERATED

## Data Ingestion

ClustrixDB is designed for real-time analytics on live operational data.

**Multi-Version Concurrency Control** to instantly create new and delete old query versions

**Scale-out architectures** to keep workloads balanced

**Tiered storage** with in-memory tables to store and analyze data faster

**Fault tolerance** to ensure data is always accessible

**SQL and ACID** to ensure data is safe and reliable

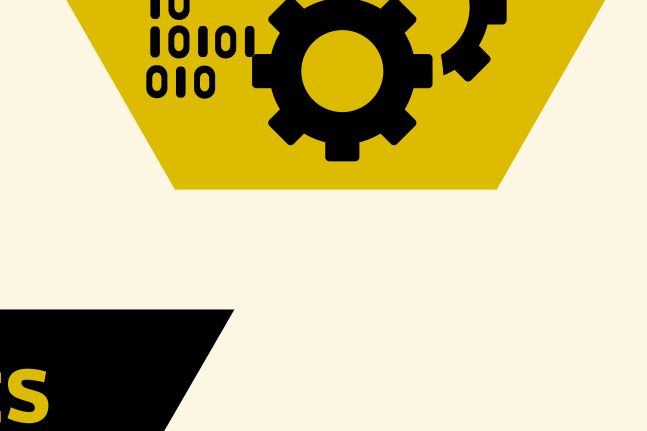

## Clarifying Your Collected Data

ClustrixDB is the database that enables analytical queries on live operational data.

Clarify your collected data and reap the rewards of:

» Fewer reporting errors

» Faster data processing for massive data amounts

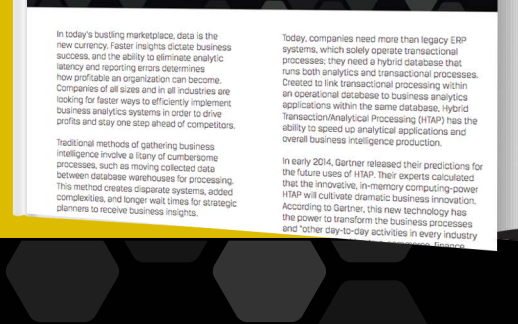

## Enjoy Sweet Profits

Produce reports that are as perfect as honey – and secrete sweet profits.

Don't let data swarm wild. Sting-out reporting errors and analytic latency that rob your business of profits. Synthesize data as you collect it with ClustrixDB.

Discover more about the power behind ClustrixDB analytics and see what it can do for your business by downloading our white paper, *Clustrix: Prepare for the Evolution of Business Analytics Processing*.
