GOING GLOBAL WITH SAGE ERP X3

ERP Features Designed On An International Scale

Globalization is more than just a buzzword. With today's technology, even the smallest 'mom and pop' shop can sell their products all over the world. But sometimes, it's the operational hurdles (not geographic borders) that prevent companies from going global. So here's a look at some of the built-in features of Sage ERP X3 that are designed for international business.

International Development Team

First and foremost, it's worth pointing out that Sage ERP X3 is developed and designed by a diverse product team that hails from several different countries. A software product ultimately reflects the team that builds it and the Sage X3 folks truly make up a diverse, innovative, and "world-wise" group.

The International Language of Efficiency

With a wide variety of language choices, Sage ERP X3 is ready for global business. Everyone on your team, from the executive offices to the warehouse floor, can use the system in their native tongue. This flexibility also extends to your customers who can be billed in multiple countries, in their native language and currency. Even if you don't have offices across the globe, this feature still comes in handy for domestic companies that hire employees who speak different languages.

Dollars, Euros, Pounds, Yen ...

From Pesos and Pounds to Euros and Yen, Sage X3 multicurrency features provide automated rate conversion, along with the ability to produce reports, invoices, and payments in the currency of your customers and vendors. A centralized table of all exchange rates allows you to leverage the power of automation to track ever-changing currency valuation and manage gain/loss adjustments.

Local and Regional Settings

When it comes to regional settings and localization, the configuration options in Sage ERP X3 can accommodate the nuances of almost any accounting law or tax jurisdiction. So rather than running different ERP systems/versions for each country you operate in (which is costly!), Sage X3 handles it all in one single version.

Success On An International Scale - The Role of ERP

[Download a copy of this free eBook](#) that provides guidance about the role ERP software plays in the long-term success of companies that do business on an international scale.

Sage ERP X3 Hackathon

Sparking New Ideas for the Future of Sage X3

Sage recently held the first-ever Sage ERP X3 Hackathon. The growing hackathon trend (also known as a hackfest or codefest) provides a hyper-productive environment where programmers and designers meet up to share new ideas and demonstrate their skills in a fun and competitive way.

Four global teams comprising Sage X3 developers, designers, product owners and quality engineers pulled an “all-nighter” during this 24-hour competition that ran from noon one day until noon the next. Each team was given a development topic to work on with the goal of providing a demonstration-ready feature at the end of the competition.

By all accounts, the first hackathon was a huge success and others are already planned for the future. And even though the teams were competing for a coveted prize, teamwork and a willingness to help one another (even across teams) ruled the day. Perhaps most important, the Sage X3 team learned to innovate and achieve tangible results in a very short time. And who knows, maybe some of the innovative ideas created at the hackathon will show up in the next release of Sage ERP X3!

Windows Server 2003 R2

Support Ending July 14, 2015

As a reminder, [Microsoft has announced](#) they will no longer support Windows Server 2003 R2 beginning **July 14, 2015**.

Now is the time to start planning an upgrade to a supported version of Microsoft Windows.

[Contact Us](#) if you're still running Sage 100 ERP (MAS 90 / MAS 200) on Window Server 2003 R2 and want to discuss migration options.
