

Installation Instructions:

The Green Drain™ GD102(2"), GD103(3"), GD1035(3.5") and GD104(4") Floor Drain Trap Seal Devices installs into either the outlet connections of floor drain bodies or into the inside of floor drain strainers.

1. Remove the grate or strainer.
2. Place the appropriate size Green Drain™ product (match the opening size 2", 3", 3.5", or 4" with the product size) into the inside of the floor drain body outlet connection. The Green Drain can also be installed into the throat of the strainer. The four flexible silicon sealing ribs ensure easy installation into openings that have variations in size.
3. Replace grate.

The Green Drain™ should be flushed with water periodically to clear debris. Otherwise, the Green Drain™ is maintenance free.
