Why Data visualization?

Businesses across all applications and in every industry are faced with mountains of data, and finding a meaningful way to manage this data has become a necessity – especially when it's data that can help our customers succeed.

EXL Healthcare's CareRadius® (patent pending) solution provides an agile reporting that allows users to quickly access, visualize, drill through and share data to improve business outcomes and address business questions: i.e. why are my denials and appeals high for this facility? Receive the added benefit of having CareRadius® elasticubes and dashboards created, and maintained by EXL as part of our reporting package.

Make faster and more accurate business decisions

› Ability to access and interact with data in a way that allows the user to derive business value (drilldowns, hovering, filtering)

› Capitalize on valuable data using analytics for predictive modeling

› Our solution allows you to have standard dashboards delivered and maintained by EXL, or you can easily create your own to meet your business needs and reporting goals

› Provides rich data visualizations and interactive BI reporting

› Has the ability to combine large disparate data sets with CareRadius® data (like claims, or lab data)

› Supports identification and stratification of members for care management programs by providing risk factors to assist in determining what population should I focus on now.

Improving user data interface

> Scalable and cost effective

+ Takes care of the back-end data management

+ End-to-end solution

> Facilitates strategic business decisions

> Everyday users are able to conduct data analysis, by creating and sharing interactive reports

> Everyday users are able to complete daily tasks, without advanced technical skills

Technology strategy

With the award-winning In-Chip™ data engine, performance never suffers, even when working with:

> Big data

> Dozens of disparate data sources

> Large amounts of concurrent users

ElastiCube sits on a separate server, allowing for scheduling/flexible data refresh and processing without impacting CareRadius® performance

> ElastiCube contains key data elements for creating, customizing and additional report drill through.

> Can map to other data sources for analytics

> R programming available for predictive analytics

Security and data governance

We know security is important. Our solution allows you control access and define permissions on a need-to-know basis. Dashboard access can be configured by:

> Single Sign on and/or Active Directory

> Users/Groups can be restricted to viewing only data that is filtered and relevant to specific groupings based on strategic business needs

> Users with a Viewer License are restricted from permanently changing a dashboard

> Users with a Designer License are able to copy and customize a dashboard while the integrity of the original dashboard is preserved

About EXL

EXL (NASDAQ: EXLS) is a leading operations management and analytics company that helps businesses enhance growth and profitability in the face of relentless competition and continuous disruption. Using our proprietary, award-winning Business EXLerator Framework®, which integrates analytics, automation, benchmarking, BPO, consulting, industry best practices and technology platforms, we look deeper to help companies improve global operations, enhance data-driven insights, increase customer satisfaction, and manage risk and compliance.
