

Future of VDI

The End User Computing Roadmap 2016-2020

We built VDI 1.0

Amitabh Sinha
CEO

GM XenApp,
XenDesktop, Citrix

Puneet Chawla
CTO

Founding Engineer
VDI, VMware

Brad Peterson
VP Marketing

VP Marketing,
DocuSign, Citrix

Jimmy Chang
**VP Products &
Alliances**

Director Products,
Citrix

**Prasad
Krothapalli**
VP Engineering

Sr. Director
Engineering, Citrix

The data center is being re-invented

The data center is being re-invented and simplified:

- Converged infrastructure simplifies existing data center architecture
- Flash increase performance by a factor of 100x
- Hyper-converged infrastructure simplifies operations

The data center will be hybrid:

- Workloads will run both on-premises and in the cloud
- Workloads will be managed from the cloud and on-premises

End Points have changed

Users use multiple devices – phone/tablet/laptop

- The consumer experience is multi-device; the enterprise experience will be any-device also; we need to optimize for an any device world

Fewer and fewer devices will be on the corporate network

- 80+% of the devices aren't going to be owned or managed by IT
- Those devices cannot be put on the corporate network
- How do end users securely access business apps and data from those devices?

What should the user experience be?

- Consistent whether the user is on the corporate network or not
- Consistent whether the user is using a PC, Mac, Phone, or Tablet
- Simple whether the user is trying to access any application

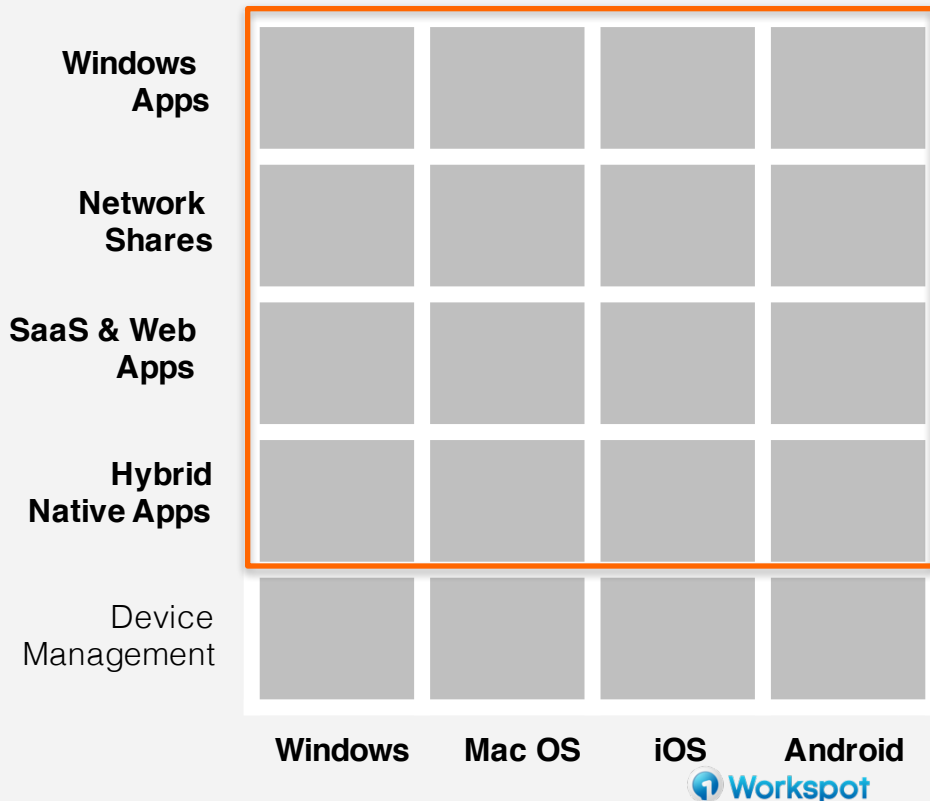

End User Computing Still a Problem for IT since 2009

End users want to access:

- windows apps like SAP
- network file shares
- SaaS apps like Office 365
- web apps like SharePoint
- native apps like Box

from any device

Many Point Solutions for End User Computing

\$\$\$\$ to write new mobile apps

- Integration with existing business processes

\$\$ to re-purpose existing apps

- Short-term solution

Manage the Device (EMM)

- Users don't want their devices locked
- 80% of the devices are personal and cannot be managed

Virtual Desktop Infrastructure (VDI)

2020 Roadmap for End User Computing

EUC roadmap to 2020 will take the following journey:

1. Solution Architecture needs to change
2. End Point Management will become unified
3. VDI 1.0 will be replaced by VDI 2.0
4. VDI will become a feature of a workspace
5. Productivity will be seamless across devices

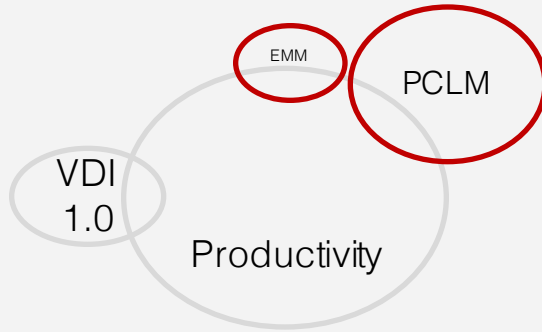

1. End user computing solution architecture needs to change

Single-tenant
On-premises
Built for legacy data center

Multi-tenant
Cloud Control Plane
Built for modern data center

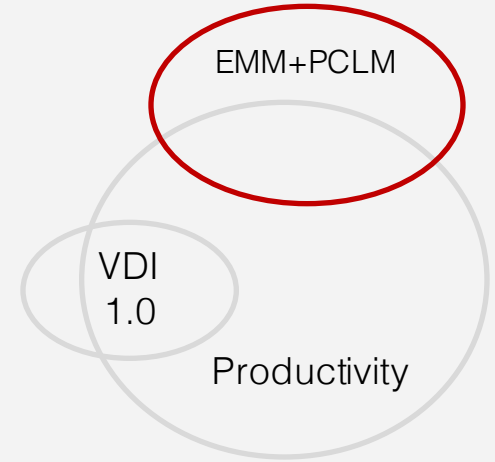

2. End Point Management will become unified

**Separate Tools for
PC and Mobile**

- Until 2015, IT had separate tools to manage PCs and mobile
- In the next few years, these tools will merge to provide a single platform for IT to manage any device
- But <20% of the devices in the world can be managed because the vast majority of the devices are not owned by the company

**Single platform
to manage any
device**

3. VDI 1.0 will be replaced by VDI 2.0

**VDI 1.0 built for
Legacy Data Center**

- VDI 1.0 was built for the legacy data center stack (servers, storage, network, virtualization, etc.)
- In 2016, VDI 2.0 is optimized for cloud and hyper-convergence and is 10x simpler

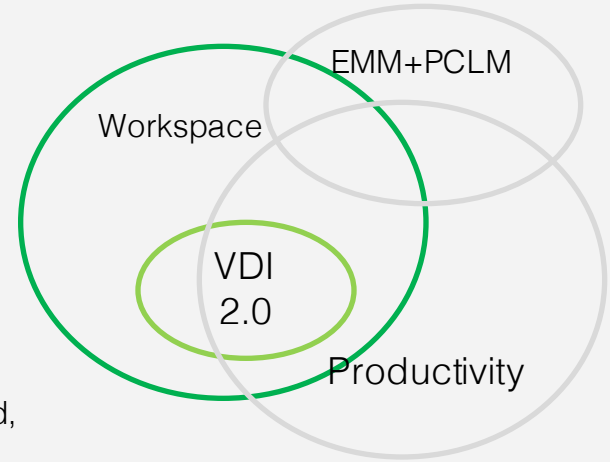

**VDI 2.0 built for cloud
And hyper-convergence**

4. VDI will become a feature of a workspace

With workspace:

- Apps could be in the public cloud, the private cloud, or on-premises
- Apps could be Windows/Web/SaaS/Native/HTML5 /Hybrid
- One of the “apps” can be a Windows desktop

A workspace enables secure access to any application from any device

5. Productivity will be seamless across devices

**PC-Centric Office
Productivity Tools**

- Today Microsoft Office is a PC-centric productivity tool
- Office 365 has already started the transition to a world where productivity tools will be available across all devices

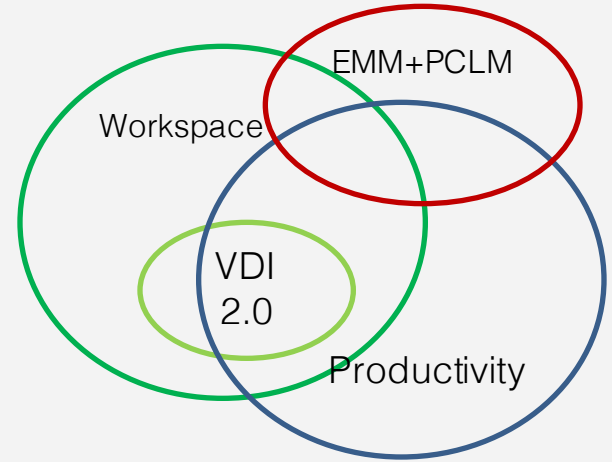

**Productivity Tools
on any Device**

End User Computing will go through a fundamental transformation

2015

Single-tenant
On-premises
Built for legacy data center

2020

Multi-tenant
Cloud Control Plane
Built for modern data center

Is your End User Computing
Solution ready for the future?
