

## *Check-in made symplr!*

### **What is symplrPass?**

Revolutionary, easy-to-use credentialing check-in from symplr, combining patent-pending scanning technology and a smartphone application.

### **Why you're going to love it!**

No computer! Unlike traditional check-in kiosks, symplrPass doesn't need an Internet connection. Stations can be placed at any entry or access point in your facility — users can get in, get verified, and get a day pass and go! Did we mention no computer?

### **How does it work?**

symplrPass uses a scan code generated within the symplr mobile app. When checking in, the user scans this code on the symplrPass station, credentials are verified and a day pass is printed.

### **Who can use symplrPass?**

Any credentialed person entering your facility can use symplrPass to check-in: vendor reps, contractors, volunteers, you name it!

### **How do I get a symplrPass?**

To find out more about implementing symplrPass, contact your symplr Account Manager.
