

Accellos WMS Integration Link

SAGE ERP X3 USERS NOW HAVE THE BEST OF BOTH WORLDS

With the integration link connecting your Sage ERP X3 system to Accellos' powerful warehouse management system (WMS), you no longer need to compromise your operations because of your size. Now, you can finally combine the strongest software for mid-sized companies into one convenient package. **Supercharge your warehouse operations with the Accellos WMS Integration Link for Sage ERP X3.**

The Accellos WMS integration link does more than just connect your warehouse to the shipping and sales info in your Sage ERP X3 system, it gives you the power to manage the physical handling of all your warehouse goods with real-time visibility, and it provides you and your workers with the productivity, organization, and profit margins of a large scale operation—all on a mid-sized company budget.

Here's how Accellos WMS helps your company:

Get real-time data. Accellos uses radio frequency and barcode technology to give you up-to-the-minute information about the location and status of your inventory at any time. No matter if your inventory is being received, picked, packed, shipped, or invoiced, you'll know exactly what's happening in your warehouse, all the time when your Sage ERP X3 system is linked to Accellos WMS.

Stop wasting time. This link allows Accellos WMS to integrate fully with your Sage ERP X3 system, meaning that when you enter data into your ERP, you don't need to enter it again into your Accellos system—increasing your data accuracy and ridding your warehouse of costly errors.

Breeze through the day. With your Accellos integration link, you don't have to fill out any more receipt of goods packing slips. You don't have to fill out any more inventory adjustment memos. You don't even have to enter in completed picking sheets. Accellos does all of that for you, and then sends the completed document to your office personnel for fast invoicing through your Sage ERP X3 system.

Plan right. When your inventory is changed or updated, the integration link enables Accellos to validate key information against your Sage ERP X3 data, ensuring that the information you have helps you lock on to better purchase planning, stock location, and order taking.
