ENPRISE RENT
For SAP® Business One

Enprise Rent is a purpose built business management solution for the equipment rental industry. Designed to meet the needs of the busiest rental company, it provides a structured approach to quoting and rental contract creation that flows through to equipment dispatch, return and variance control, with flexible invoicing options, allowing detailed real-time cost and profit analysis at the click of a button.

ENPRISE RENT
UNLEASH THE POTENTIAL OF YOUR EQUIPMENT RENTAL BUSINESS USING ENPRISE RENT FOR SAP BUSINESS ONE

However you look at it, if workflow processes in your equipment rental business are unwieldy, and timely access to information is difficult, with data stored across numerous disparate systems, visibility will be impaired and profit and growth will suffer.

A single, purpose built tool to quote, dispatch, manage, and report on all your rental activities, complete with a back-office suite of financials from the world's leading financial software company, will unleash the potential locked within your business and remove barriers to growth.

Enprise Rent holds the key to success for equipment rental companies, by eliminating complexity of workflow processes, centralizing data and enabling real-time access to information.

Greater Visibility Starts with a Quote

Detailed quoting capability enables tracking of all costs, potential revenue and profit associated with renting particular equipment items for a given project. Additionally, building a granular history of financial data for each item in your rental inventory gives you visibility of your most profitable rental lines at the click of a button, as well as any opportunity cost of having unrented items. For simplicity, users quote rental and services items in the same location.

Plan, Allocate, Dispatch

Our powerful dispatch manager ensures customers are kept happy, by enabling your team to easily access up-to-the-minute information to plan, pre-allocate and deliver rental items to agreed schedules. Multiple dispatches and returns cater perfectly for larger projects.

Goods Out = Goods In

The built-in returns manager enables efficient receipt of equipment back into stock, finalizing rental transactions on the agreement. Return stock quantities are determined by the user, rather than the system, for ultimate accuracy and accountability.

Flexibility is Prerequisite

As not every rental contract is as simple as we'd like, we've catered for even the most challenging requirements by ensuring complete control over invoicing, even down to frequency and individual invoice amount. Billing and cost accrual can even be independently suspended if necessary.

Accountability Right to the Finish

Rounding out the process, the variance manager tracks unreturned equipment and caters for any additional billing or stock adjustments required.
