

Press Release

Enmotus Partners with Colfax to Provide Advanced Feature Hybrid Storage Systems Based on Standard Server Platforms

FuzeDrive™ software enables Colfax to provide complete advanced tiered storage solutions that compete with expensive, proprietary brand hybrid arrays.

Aliso Viejo, CA – Nov 12, 2014 – Enmotus, a storage hybridization software company, today announced a partnership with Colfax International, a leading provider of fully-customizable, high-performance computing solutions. The partnership will focus on market development and joint promotion of hybrid storage solutions using Enmotus' FuzeDrive storage hybridization software.

“Colfax’s expertise in high performance computing systems is synergistic with Enmotus’ storage hybridization software value,” said Gautam Shah, CEO of Colfax International. “The ability to create true hybrid storage solutions utilizing high speed flash, along with the flexibility to match the size of the tiers to specific user needs, allows us to deliver high performance flash solutions at lower costs,” added Shah.

FuzeDrive next generation hybrid storage software is compatible with both Windows and Linux operating systems and transforms standard X86 storage servers into virtualized storage platforms. The block based MicroTiering™ technology reacts to dynamic access patterns in real-time, alleviating the need for user intervention. Sophisticated visual management tools allow easy monitoring of system performance, and advanced features such as file pinning allow critical files to be locked to the high-speed storage media. Free trial versions of the software are available at www.enmotus.com.

“Our partnership with Colfax will allow us to expand our presence in domestic markets,” said Andy Mills, CEO of Enmotus Inc. “Colfax’s ready to go HPC solutions have a strong reputation in Fortune 1000, educational institutions as well as Government applications. We are delighted to be working with Colfax in addressing the storage and performance requirements of these customers,” added Mills.

See Colfax at Supercomputing 2014 (Booth 1047) being held in New Orleans on November 16-21.

About Colfax International

Colfax International is a leading provider of innovative and expertly engineered workstations, servers, clusters, storage, and personal supercomputing solutions. Ready-to-go Colfax HPC solutions deliver significant price/performance advantages, and increased IT agility, that accelerate your business and research outcomes. Colfax International's extensive customer base includes Fortune 1000 companies, educational institutions, and government agencies. Founded in 1987, Colfax International is based in Sunnyvale, California and is privately held. For more information, please visit www.colfax-intl.com.

About Enmotus

FuzeDrive intelligent storage hybridization software eliminates the complexities of integrating multiple classes of storage media, including flash, hard drives and memory class storage. Our virtualization and real-time tiering technology creates true hybrid storage solutions, which dynamically moves frequently accessed data in real time to high-speed storage without user intervention, delivering leading performance per dollar metrics. FuzeDrive accelerates high performance applications such as databases, analytics, and video processing, as well as content delivery solutions. For more information, please visit www.enmotus.com.
