OAG analytics

DOT analyser

Convenient access and insight into US aviation data

View passenger load factor for historical US carrier flights

Easily access US airlines' profitability and balance sheets

Monitor fuel costs

Benchmark employment statistics for US carriers

DOT Analyser provides detailed and comprehensive insights into **traffic flows, schedules, connections, route planning** and **network analysis** exclusively for the US market.

The data in this product is from the US Department of Transport (DOT), including international flights but only when a route is to/from the US.

Powerful insights it can deliver
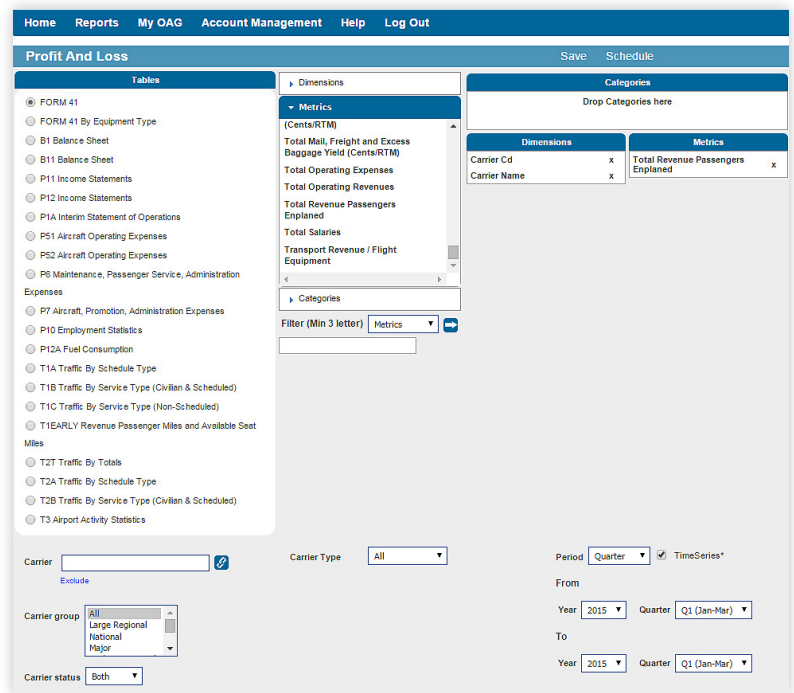

Traffic Power Table
Analyse T100 Traffic data across different dimensions – airline, departure/arrival airports, city, country, state, region and by month, quarter or year.

O&D Power Table
OD1A and OD1B data to analyse passenger counts and revenues. This data is gathered from US DOT's 10% sampling of passengers and is estimated for 100% of passengers.

Finance Power Table
Aggregated Form 41 data with DOT US certified airline schedules data for financial analysis including balance sheets, income statements and employee counts.

Report features:

- Historical data available for **long-term analysis**:
  - Traffic Power Table – 1981 domestic, 1990 International
  - O&D Power Table – 1981 OD1A, 1998 OD1B
  - Finance Power Table – 1968 .
- **Fully customisable** for easy manipulation.
- All reports exported to .csv, .pdf, .xls and .xlsx files.
- **Configure reports** and schedule their generation automatically.
- **OAG reference tables** for airports, airlines, aircraft codes, alliances, country/regions & MCT's.
