DATA CENTER PRIVACY SYSTEM

In order to achieve an additional layer of security in data centers — especially co-location facilities—“cages” are being constructed. Developed in response to this growing demand, Great Lakes’ Data Center Privacy System features:

- Panels with 1.25" x 1.25" square hole pattern to create a private, contained area (which can often provide insurance benefits)
- Within co-lo facilities, panels help reduce hot air recirculation from one enclosure/one customer to the next
- Solid panels available to completely eliminate visibility within an area
- All System components (beams, bolts, and additional hardware) can only be accessed from within the contained area, preventing potential tampering
- Panels available in 8', 9.5', and 14' sections; designs are engineered and ready to be produce*
- Custom sizes can be built to specific widths and heights to accommodate data center layout and building infrastructure
- In addition to Great Lakes standard Data Center Privacy System, custom systems can be created based on customer requirements

* 8, 9.5 and 14' panels and related hardware are already engineered, but will still require a lead time; please call 1.866.TRY.GLCC for details

Custom Data center Privacy System based on customer requests; features a steel frame with rigid mesh
