WHY CHOOSE RAPIDRUN

Time & Money Savings
High Performance & Quality
Single Cable, Multiple Signals

RapidRun® is the most complete audio/video cabling system—built to save installation time and reduce the likelihood of return service calls due to faulty terminations.

The ingenuity behind RapidRun is its ability to carry multiple signals over a single runner cable. Since you won't have to buy and install multiple cables,

RapidRun saves you time and money when installing the infrastructure to support your projector system, interactive whiteboard, digital signage system, or audio/video system.

The simple, color-coded runners, wall plates, and flying leads require no tools, splicing, or soldering—making termination a breeze. Just connect and

secure the wall plate and flying lead to the runner and you are finished.

This revolutionary system provides ease of use, flexibility, and superior signal transfer rates. No cabling solution on the market will do more to make your installations easier or more versatile!

HOW RAPIDRUN WORKS >

RapidRun® is a three-part (one runner, two break-aways), modular cabling solution that starts with a single runner cable that runs through walls, ceilings, and fixtures.

The runners are available in CMG and plenum rated versions, and support multiple signal types such as VGA, Composite Video, 3.5mm Stereo Audio, RCA Stereo Audio, DVI, and HDMI®—with future plans of supporting DisplayPort.

Each end of the runner cable is terminated with the appropriate flying lead or wall plate to connect to the system's source and display devices. Many configuration options are available to meet the needs of virtually any PC or audio/video application.

THE 2-STEP RAPIDRUN SYSTEM

1. Choose a Runner
