

Hidden Benefits of SAP HANA® Cloud Unlocked

Cloud-based SAP HANA hosted and managed by Symmetry, powered by HPE technology

Accelerate business analysis with SAP HANA. Maximize business outcomes with HPE. Get it all from Symmetry.

Responding immediately to business-critical demands is becoming essential in this always-on world. Up until now, doing so in real-time was almost impossible as it often meant sacrificing the amount of data that you could glean from your database. In addition to how deep or broad your available data was, which often led to bad decisions, or worse yet, no decisions.

With SAP HANA powered by HPE Converged Infrastructure, you no longer have to choose—you can process massive quantities of data in the cloud in real-time, and get immediate results from analytics and transactions. And, you can do it without having to make a significant capital investment. Symmetry's SAP HANA Cloud solution powered by HPE technologies provides you with real-time business analytics and real-time applications, all managed in a secure, scalable, cost-effective cloud environment.

Seize the power of SAP HANA

Get real-time, mission-critical insight with SAP HANA—featuring in-memory database technology that dramatically accelerates BI dashboard creation and report queries. In-memory computing is a game-changing technology that provides the speed and agility to power analytics at unprecedented performance levels, while remaining cost-effective in a cloud based solution. With SAP HANA Enterprise Cloud solutions hosted and managed by Symmetry, powered by HPE Converged Infrastructure, you receive the impressive power of SAP HANA in a fully managed cloud environment, so that you do not have to implement or manage anything on-site.

Simplify with HPE AppSystems for SAP HANA

Deploy SAP HANA applications faster and more efficiently as delivered by Symmetry with HPE AppSystems for SAP HANA—a portfolio of solutions that leverage the speed of SAP Business Suite tools using powerful, integrated resources in pre-configured, pre-loaded appliances, all operating in an HPE Converged Infrastructure. This modern suite of applications unifies analytics and transactions on a single in-memory platform for smarter innovations, faster business processes, and simpler interactions. Now get complete management of every aspect of your operations in real-time rather than waiting for reports to run so that you can:

- Uncover new growth opportunities ahead of the competition
- Dramatically accelerate your core business processes to run at market speed
- Empower your people to decide and act in the moment with real-time insights
- Innovate without disruption on an open platform

Get Going Faster with Symmetry

With SAP HANA Cloud hosting and managed services from Symmetry, you can run your business smarter, faster, and simpler than ever before. And because SAP HANA is designed and built for mission-critical applications, you get the performance, integration, and security your business requires in today's competitive business landscape.

Reap the benefits of unparalleled expertise and the freedom to refocus existing IT resources on core competencies. Symmetry will tailor fit your solutions to meet your evolving business needs, while keeping your business on the latest, most up-to-date hardware and software without the disruptions of in-house upgrades. All of this amounts to a one of a kind end-to-end accountability you can get only from the industry leader in enterprise applications, in-memory technology, business analytics, and the strongest ecosystem available in the world, resulting in:

- Lowered CapEx
- Simplified management and operations
- Pre-integrated solutions that are tuned and optimized for SAP HANA, and certified by SAP
- Trusted and secure HPE Converged Infrastructure

Tailored to Fit your Business

HPE AppSystems for SAP HANA are built on the solid foundation of HPE Converged Infrastructure technology—integrating faster, more capable servers, storage, networking, software and services into a shared pool of 24x7, lights-out, virtualized, automated resources. With that, you have an infrastructure that is more efficient, less expensive and offers greater overall flexibility.

As an HPE Gold Partner Services Provider Symmetry offers you unparalleled choices for deploying SAP HANA, including:

- HPE CloudSystem—the only complete, integrated cloud solution for your SAP environment
- Application-specific hosting for mission-critical applications such as SAP and email
- Compliant services targeted at healthcare, government, media and more

HPE AppSystems for SAP HANA hosted by Symmetry are a portfolio of optimally configured solutions with preloaded software and a full range of included services.

Discover the Symmetry Difference

Confidence, consistency and choice

Symmetry services are backed by HPE’s Converged Infrastructure—providing you with the essential foundation of technologies and services to confidently build, consume, and manage your IT systems across private, managed and public clouds. As a HPE Gold Partner Services Provider Symmetry offers:

- Your choice of the best cloud solutions and delivery model for your specific business needs
- Confidence that your business assets are securely managed
- Consistency through a single architecture with one simple consumption experience

A Complete Solution

Symmetry provides an end-to-end solution to host, manage, and accelerate your applications in the cloud—so you can rely on services delivered on an agile platform, which shortens the time needed to provision systems to meet the demands of your enterprise initiatives. And that lets you refocus IT spending from day-to-day operations to creating the innovations you need to leverage your business advantage.

Symmetry is more than a vendor. It is a right-sized service partner with deeply rooted ERP application hosting management and SAP-certified experience since its start in 1996. Symmetry delivers cost-effective services with the highest customer service quality, with direct access to dedicated consultants 24x7x365 access. As the premier hosting and managed services provider, Symmetry’s large data center network with enterprise-class hosting and cloud services go beyond SAP, by providing our customers with the flexibility to host and manage entire data center operations, encompassing multiple platforms such as core business systems, and integrating third-party applications.

Peace-of-mind Built-in

You can rest assured that your information systems are protected with technology certified by SAP for HPE AppSystems—the disaster tolerant (DT) architecture. As an HPE Gold Partner Services Provider Symmetry offers a SAP-certified DT system for SAP HANA. The HPE DT system uses HPE PS9000 Continuous Access to perform synchronous replication of a productive SAP HANA database to a secondary site.

In the event of planned or unplanned downtime of the primary system (for instance, due to a power outage), the HPE DT system provides a semi-automatic mechanism to quickly return to normal operation with no data loss—thereby mitigating risk, improving IT availability, reducing the cost of downtime, and ensuring that you always have access to business data.
