

PowerMate® Hearth Kit

PowerMate® Model LE-1

The “stacker” is why our motorized stairclimber is the number one choice for moving stoves, fireplace inserts and barbecues. Its twin-drive design means that one person can easily handle a 650 lb. stove.

- 1. BALANCED** – the center of gravity shifts with the push of a button, so the weight of the load works in your favour or stays perfectly balanced – even on stairs and with the heaviest loads.
- 2. COMPACT** –PowerMate® makes the tightest turns in the industry – there are no forks to get in the way on tight landings.
- 3. POWERFUL** – two heavy duty motors do the balancing and the lifting – up and down stairs, up to 40” onto hearths or pedestals and even on and off vans and pickups.

EXTRA STRAP BAR

Third tie-down safely secures tall and oversized loads.

EXTENDED TOE PLATE

The oversized steel toe plate supports heavy and awkward loads.

Model LE-1 comes complete with 2 strap bars, sealed battery pack, battery charger, stacker unit and wheel brakes.

PowerMate® Performance

Order your LE-1 today and become another happy PowerMate® customer.

“ I am very happy and completely satisfied with both the performance and durability of our PowerMate® LE-1, that we purchased in 2001 for delivering and installing cast iron wood stoves. Well five years later and 100's of successful lifts, our unit is still going strong. Even more importantly, we have not lost a single man-hour to back injury when using the LE-1 and that has saved us many times the original machine cost”.

Mr. Lansing Meyer,
Hearth & Home Fireplace Specialties

“ I am happy to offer my referral to your customer base. We especially enjoy the stacker feature to raise the wood stoves onto displays in our showroom and hearths in customers homes. The PowerMate® LE-1 has performed to all our expectations and exceeded them in many ways. It really is an amazing machine”.

Mr. Lester Bowman
Bowman's Stove and Patio

of its kind.**

PowerMate® motorized
stairclimbers are the smart way
to move wood stoves & BBQ's.

PowerMate® puts safety first

The risk of serious¹ injury increases if installers rely on brute strength to move heavy wood stoves and BBQ's. Using a PowerMate® to move heavy components is an easy way to substantially reduce that risk.

PowerMate® powers loads up/down stairs, on/off vehicles or loading docks and moves loads across flat surfaces in a completely balanced position.

Serious injuries cost serious money

According to OSHA, just one strain injury costs an employer on average \$30,099 in indirect costs.

Independent ergonomic studies show that PowerMate® moves most loads with just 13% of the physical effort compared to using a regular hand truck.

¹Occupational Safety and Health Administration (OSHA), www.bls.gov/iif/oshwc/osh/os/ostb1917.pdf (for NAICS 238290)

PowerMate® makes money for you

" Since the purchase of our electric PowerMate®, my delivery drivers say how easy the deliveries of pellet/ wood stoves have been. I can honestly say that our WCB claims have dropped since purchasing this unit. As well the time taken to deliver such products has come down. I highly suggest this unit to anyone. In today's market any expense savings is great for the survival of the bottom line".

Mr. Mike Wood
Central Home Improvements

PowerMate® LE-1 provides:

- **higher productivity** – half the manpower, can move bigger loads more efficiently.
- **less time on site** – power loads off your vehicle, up the steps, into the house, down the basement stairs and onto the hearth. – no wasted time.
- **fewer injuries** - proven to reduce physical effort by 87%.
- **better margins** - lower delivery and installation costs keep you more competitive.

Training for safety and efficiency

PowerMate® motorized stairclimbers are easy to use. They are also powerful lifting devices – the aluminum models can carry up to 650 lbs – so users need to be completely familiar with their features and controls to work confidently, efficiently– and safely.

That's why we recommend operator training. Our trainers will ensure that you or your personnel understand and use the proper handling procedures for your specific applications and loads. We can even deliver training in your actual working environment.

For over 30 years PowerMate® has been proven in the hearth and patio industry to move wood stoves, BBQ's, fireplace inserts, outdoor kitchens and more.
