

Mobile Development Services

e-Zest can help you to empower your existing enterprise solutions by extending it to mobile platforms offering mobility to existing services.

Smartphones have become an integral part of users' daily lives. Consumers use smartphones as an extension of their desktop computers and use it as they multi-task and consume other media. This creates a need for every business to have a mobile existence to reach extended customer and employee base. Mobilizing your existing enterprise solution will keep you and your customers ahead in the race.

We also offer customized mobile solutions to your needs. We can cover your different business needs as follows:

You have a well established enterprise solution and want to extend it over mobile platforms.

We have been working in enterprise solutions and have numerous satisfied customers. We know exactly what it would need to extend the solution to support mobile platforms and our mobile team will come up with suitable solution for you.

You have a website and looking to go mobile

We will develop a mobile website supporting all major smartphone screen resolutions to avail easy surfing for mobile users. The process will include customization of supporting web services.

You have an excellent business idea but don't know how to proceed

Just discuss your idea with us and our mobile analysts will provide you a solution with wireframes and prototypes.

You are looking for smartphone and/or tablet applications to be hosted on app stores to market your business or earn revenue

We can offer you customized applications developed for each platform or a cross platform solution after analyzing your needs. We will help you to select between native and cross platform solution by helping you to understand the pros and cons of the same.

 **iPhone**
