

## It takes just one stolen laptop

... To put your entire reputation at risk. As required by the HITECH Act, the Secretary of Health & Human Services must post a list of breaches of unsecured protected health information affecting 500 or more individuals. Since tracking began more than two years ago, 166 breaches impacting nearly five million patients were reported. 96 of the 166 HIPAA breaches (66%) involved theft, and 58% of those thefts involved laptops or computers.

### Lock down devices

Unauthorized access of sensitive data can result in financial loss, HIPAA violations and damage to your reputation.

You have an opportunity to lock down your assets, including:

- Laptops
- Desktops
- Removable media
- Mobile phones

You get quick and cost-effective protection that doesn't disrupt your daily routine. Encryption works behind the scenes to automatically protect your assets. And best of all, no special training is required.

### Fortune-500 class IT paid for by thousands

For thousands of providers of post-acute care across the country, vcpi solves challenges with IT and beyond. With vcpi as your IT team, you tap into a shared service model of people, processes and technology that would be impossible to justify on your own. With IT off your plate, you'll concentrate on what you do best: delivering high quality care on which your reputation and reimbursements depend.

## Your advantage:

- Quick and cost-effective protection
- Protects data without changing your experience, allowing you to continue working as usual
- No special training required
- Helps enforce central policies
